At Home In The Universe Masters Of Modern Physics:

Extraterrestrial Ethics Jensine Andresen, 2023-11-25 This unique book takes both inductive and deductive approaches to the topic of extraterrestrial ethics Inductively it asks what kind of ethics an advanced intelligent extraterrestrial species might display Deductively it asks how human beings should transform their own understanding of ethics to prepare for widespread contact with an advanced extraterrestrial species Using the ontological interpretation of quantum mechanics proposed by physicist and philosopher David Bohm Extraterrestrial Ethics considers how an extraterrestrial intelligence ETI may view ethical concerns relating to humankind The book examines two areas of concern nuclear technologies and the militarization and weaponization of space The text of the Fiscal Year 2022 National Defense Authorization Act FY22 NDAA in the United States clearly states that Unidentified Aerial Phenomena UAP have been reported at sites associated with nuclear weapons nuclear powered ships and submarines nuclear power generating stations etc suggesting that ETI is very concerned about the human use of nuclear technologies Furthermore the more ubiquitous level of UAP sightings by the U S military over the last few years as documented in the June 2021 report from the Office of the Director of National Intelligence ODNI in the U S suggest that ETI also is concerned about rapid acceleration relating to the militarization and weaponization of space The book concludes by advocating a normative approach to de militarize space *Image Structure* Luc

Florack, 2013-04-17 Despite the fact that images constitute the main objects in computer vision and image analysis there is remarkably little concern about their actual definition In this book a complete account of image structure is proposed in terms of rigorously defined machine concepts using basic tools from algebra analysis and differential geometry Machine technicalities such as discretisation and quantisation details are de emphasised and robustness with respect to noise is manifest From the foreword by Jan Koenderink It is my hope that the book will find a wide audience including physicists who still are largely unaware of the general importance and power of scale space theory mathematicians who will find in it a principled and formally tight exposition of a topic awaiting further development and computer scientists who will find here a unified and conceptually well founded framework for many apparently unrelated and largely historically motivated methods they already know and love The book is suited for self study and graduate courses the carefully formulated exercises are designed to get to grips with the subject matter and prepare the reader for original research *The Astrobiological*

Landscape Cirkovic, 2012-06-21 Introducing new multidisciplinary concepts this book explains how we have reached a critical threshold in the study of astrobiology

Mercury, 1995 **A Distant Light** Henry W. Kendall, 2013-12-23 A collection of essays by a Nobel Prize Laureate on a wide range of critical issues facing the world and the role of scientists in solving these problems. Kendall has been closely involved with the Union of Concerned Scientists, a group that began as an informal association at MIT in 1969 to protest US involvement in Vietnam and is today an organization with an annual budget exceeding 6 million with 100 000 supporters worldwide. UCD is today a voice of authority in US government science policy particularly with regard to environment issues most recently the worldwide initiatives on global warming. Together these essays represent both the successes and failures of science to impact public policy, the challenges facing scientists and offers practical guidelines for involvement in science policy. The essays are roughly chronological organized by subject with introductions beginning with the controversies on nuclear power safety and Three Mile Island then followed by sections on national security issues, global environmental and resource problems and radioactive cleanup and other current issues. Kendall's Nobel Prize lecture as well as a more popular version thereof is also included and is the only really technical material in the book. The photos in the book are Kendall's from an 1992 exhibition of his work. Henry Kendall was awarded the Nobel Prize in physics jointly with J I Friedman and R E Taylor in 1990 for his research in the structure of the proton and neutron. In 1969 he was one of a group of physicist who founded the Union of Concerned Scientists UCS and is currently Chairman of its Board of Directors.

Subject Guide to Books in Print, 1997 **Essays of a Soviet Scientist** Vitalii Iosifovich Gol'danskii, 1997 The essays, articles and interviews that make up *Essays of a Soviet Scientist* offer a revealing portrait of Vitalii Gol'danskii and his generation. Here are Gol'danskii's reminiscences of his extraordinary scientific mentors and colleagues, his reflections on science's obligations to humanity, his writings on the arts and the media, his courageous and passionate arguments against nuclear weapons and his warnings about the resurgence of anti-Semitism in today's Russia. Through the compassionate, authoritative perspective of Vitalii Gol'danskii we find in the life of a man and a nation many lessons for us all. The role of science and the scientist in society, the oppressive influence of authoritarianism on a nation's intelligentsia, scientific integrity.
