Advanced Approach Light System Behrend, Ferdinand, 2017-08-25 The constant growth in aviation requires the

introduction of new technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants Das stetige Wachstum in der Luftfahrt erfordert die Einf hrung

neuer Technologien um der Nachfrage nach steigender Kapazität gerecht zu werden. Insbesondere das System Flughafen stellt hierbei oftmals den limitierenden Faktor dar. Schlechte Sichtbedingungen und die unzureichende bodenseitige Ausrüstung mit Navigationseinrichtungen können für Einschränkungen in der Aufrechterhaltung des bestehenden Verkehrsflusses sorgen, insbesondere bei Landeanflügen. Das konventionelle Instrumentenlandesystem besteht aus einer Vielzahl an technischer Komponenten, die hohen Aufwand hinsichtlich Wartung und Betrieb verursachen. Kleine Flughäfen sind oft nur teilweise oder gar nicht mit den entsprechenden Bodenkomponenten ausgerüstet, so dass der Flugbetrieb bei bestimmten Sichtbedingungen vollständig eingestellt werden muss. Neue satellitengestützte Anflugverfahren bieten die Möglichkeit, den Flugbetrieb auch bei schlechten Sichtbedingungen aufrechtzuerhalten, unabhängig von der bisher notwendigen Bodeninfrastruktur. Diese bieten mittlerweile ebenso eine auf der barometrischen Höhenmessung oder einem aufgewerteten Satellitensignal basierende vertikale Flugführungskomponente. Allerdings besteht mit der Verwendung entsprechender Anflugverfahren auch eine neue mögliche Fehlercharakteristik des vertikalen Flugführungssignals. Ist ein Fehler beim auf elektromagnetischen Funkwellen basierenden Instrumentenlandesystem winkelförmig, dh je näher sich das Luftfahrzeug dem Sender am Boden nähert, umso kleiner wird die absolute Ablage zum Sollanflugweg. Ist dieser bei satellitengestützten Anflügen konstant über den gesamten Endanflug, eine große Abweichung vom Sollanflugweg auch kurz vor Erreichen der Landebahnschwelle, kann die Folge sein. Bei schlechten Sichtbedingungen nahe den Minima eines Präzisionsanfluges kann der Fehler oft erst bei Erreichen der Entscheidungshöhe und dem damit verbundenen visuellen Kontakt zu entsprechenden Bodenmerkmalen erkannt werden. Je größer die Ablage zum Sollanflugweg, umso entscheidender ist das unverzügliche Einleiten des Fehlanflugs, um ein Verlassen der entsprechenden Hindernisfreibereiche zu verhindern. Untersuchungen haben gezeigt, dass die aktuell vorhandenen visuellen Merkmale der Anflugbefeuerung nicht ausreichend sein können, die tatsächliche Position bezüglich der Landebahnschwelle und des Sollanflugweges bei Erreichen der Entscheidungshöhe einzuschätzen. Das hier vorgestellte Advanced Approach Light System soll die Cockpitbesatzung als zusätzliches visuelles Merkmal bei der Entscheidung unterstützen und so zur Verbesserung des Situationsbewusstseins hinsichtlich konstanter vertikaler Fehler beitragen. Das neue Befeuerungssystem wurde in einen Flugsimulator integriert und innerhalb zweier Versuchsreihen mit unterschiedlichen Sichtbedingungen und Entscheidungshöhen von lizenzierten Verkehrspiloten getestet. Dabei sollte neben der grundsätzlichen Funktionalität auch die operative Einsetzbarkeit in den bestehenden Ablauf der Handlungsabläufe im Cockpit untersucht werden. Die Ergebnisse der Versuchsreihen haben eine erhebliche Verbesserung im Erkennen vertikaler Fehler mit Hilfe des Advanced Approach Light System aufgezeigt. Die Entscheidung zum Einleiten des Fehlanflugs erfolgte direkt und unverzüglich, wodurch das Luftfahrzeug auch bei sehr niedriger Entscheidungshöhe noch innerhalb des Hindernisfreibereiches blieb. Im Gegensatz dazu wurde bei den Versuchsteilnehmern, denen nicht das neue System zur Verfügung stand, die Entscheidung eher zögerlich und oftmals viel später getroffen, was zu einem Verlassen des

Hindernisfreibereichs führte Das Situationsbewusstsein der Luftfahrzeugführer zum Erkennen vertikaler Fehler beim Erreichen der Entscheidungshöhe wurde durch das Advanced Approach Light System wesentlich erhöht Die Integration in bestehende Arbeitsroutinen und der operative Einsatz erfolgten bei hoher Akzeptanz problemlos durch die Versuchsteilnehmer

Symposium,2008 *Safety of Computer Architectures* Jean-Louis Boulanger,2013-01-09 It is currently quite easy for students or designers engineers to find very general books on the various aspects of safety reliability and dependability of computer system architectures and partial treatments of the elements that comprise an effective system architecture It is not so easy to find a single source reference for all these aspects of system design However the purpose of this book is to present in a single volume a full description of all the constraints including legal contexts around performance reliability norms etc and examples of architectures from various fields of application including railways aeronautics space automobile and industrial automation The content of the book is drawn from the experience of numerous people who are deeply immersed in the design and delivery from conception to test and validation safety analysis of safety FMEA HA etc and evaluation of critical systems The involvement of real world industrial applications is handled in such a way as to avoid problems of confidentiality and thus allows for the inclusion of new useful information photos architecture plans schematics real examples **Diccionario Ingles Técnico Aeronáutico** Facundo Conforti, Augusto DeSantis, La industria aeroespacial es la segunda actividad mas normada luego de las actividades nucleares esta regida por infinidad de normas reglamentaciones directivas documentacion especifica y todo tipo de manuales de referencia obligatoria La gran mayoria llega a manos de usuarios operadores talleristas etc en idioma ingles el idioma de uso aeronautico por naturaleza A ello se suma el hecho de que la industria aeronautica no esta aislada de las actividades humanas sino que interactúa y hace su aporte a ellas creando la necesidad de un sólido vínculo interdisciplinario Ahora bien si bien conocemos la existencia de esta necesidad de creación de un fuerte vínculo interdisciplinario tambien sabemos que en esta tarea nos encontramos con una gran barrera en el mismo la comunicación A partir de esto es posible considerar varios impedimentos en esa barrera Uno de los mas importantes es el idioma como factor concurrente esta el uso de regionalismos y como consecuencia de ellos la aplicación de jergas especificas Desde los albores de la aviación hemos convivido con ese problema sucede que al incrementarse día a día el número de operaciones al crecer el parque aeronautico y convertirse la aviación en una necesidad para el resto de las actividades humanas las condiciones inseguras los incidentes y los accidentes continuando produciéndose quedando de manifiesto las falencias de la industria en ese aspecto ii Las nuevas tecnologías en materiales los nuevos métodos de diseño y los planes de

mantenimiento con técnicas de inspección no destructivas han reducido los riesgos latentes de fallas técnicas pero no todos los aspectos relacionados con la vida humana puede solucionarlos la tecnología por lo que en paralelo con los desarrollos tecnológicos se han creado conceptos de gestión del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevención se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interacción antropológica CRM MRM LOFT SHELL etc la comunicación es un vínculo importante si no en la seguridad operacional Si trasladamos lo expuesto a las tareas diarias ya sea en la operación de una aeronave en el mantenimiento de la misma en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial se presentará el problema del uso del idioma inglés los regionalismos y las jergas específicas factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas Cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común es inevitable tanto en inglés como en español el uso de regionalismos y argot jargon en inglés Por ejemplo un técnico ecuatoriano hablará de la bita cora de la aeronave mientras que uno argentino hablará de la libreta historial de la aeronave Esta divergencia puede justificarse como un caso de regionalismos de países diferentes ahora bien en el segundo ejemplo el mismo técnico argentino en la provincia de Buenos Aires hablará de chavetas para frenar un bulón mientras que otro técnico argentino en Córdoba hablará de cupillas para frenar un bulón En paralelo se puede ver también que los diferentes fabricantes tienen lexicos específicos con respecto a sus productos por ejemplo uno de los más conocidos fabricantes británicos de motores posee un sistema propio de códigos de denominación y aplicación de Boletines de Servicio no mandatorios muy distinto al que manejan sus competidores directos de Estados Unidos y Canadá Por eso la intención de este manual iii es contemplar una cantidad importante de tales divergencias presentándolas en cada asiento específico para que el uso del término y el concepto se apliquen con la mayor propiedad posible La propuesta de este manual es constituirse en una obra de referencia pensada como apoyo idiomático para interpretar y utilizar con mayor exactitud todos los niveles en que se presenta la terminología aeronáutica y contribuir a la aclaración de las dudas que continuamente se dan en la traducción de ambas lenguas en los diferentes campos de la aviación
