Rapid development observed in modern production is firmly connected with the development of new assembly and disassembly systems. In small batch production where fast changes of products and short development times of new products are demanded, development of reliable, fast, adaptable and self-teaching assembly systems can be observed. Important fields of product development such as product design, development of planning systems, simulation and modelling, logistics, mechatronics and sensors, development of new assembly system components as well as collecting and processing of knowledge are essential for the development of new intelligent assembly systems.
