Bhalerao, 2012-11 This book centers around the study of neutron stars especially those in massive binary systems To this end it has two distinct components the observational study of neutron stars in massive binaries with a goal of measuring neutron star masses and participation in NuSTAR the first imaging hard X ray mission one that is extremely well suited to the study of massive binaries and compact objects in our Galaxy The Nuclear Spectroscopic Telescope Array NuSTAR is a NASA Small Explorer mission that will carry the first focusing high energy X ray telescope to orbit NuSTAR has an order of magnitude better angular resolution and has two orders of magnitude higher sensitivity than any currently orbiting hard X ray telescope I worked to develop calibrate and test CdZnTe detectors for NuSTAR I describe the CdZnTe detectors in comprehensive detail here from readout procedures to data analysis Detailed calibration of detectors is necessary for analyzing astrophysical source data obtained by the NuSTAR I discuss the design and implementation of an automated setup for calibrating flight detectors followed by calibration procedures and results Neutron stars are an excellent probe of fundamental physics The maximum mass of a neutron star can put stringent constraints on the equation of state of matter at extreme pressures and densities From an astrophysical perspective there are several open questions in our understanding of neutron stars What are the birth masses of neutron stars How do they change in binary evolution Are there multiple mechanisms for the formation of neutron stars Measuring masses of neutron stars helps answer these questions Neutron stars in high mass X ray binaries have masses close to their birth mass providing an opportunity to disentangle the role of nature and nurture in the observed mass distributions In 2006 masses had been measured for only six such objects but this small sample showed the greatest diversity in masses among all classes of neutron star binaries Intrigued by this diversity which points to diverse birth masses we undertook a systematic survey to measure the masses of neutron stars in nine high mass X ray binaries In this book I present results from this ongoing project **The Exoplanet Handbook** Michael Perryman, 2011-05-26 Exoplanet research is one of the most explosive subjects in astronomy today More than 500 exoplanets are now known and groups world wide are actively involved in a broad range of observational and theoretical efforts This book ties together these many avenues of investigation from the perspectives of observation technology and theory to give a comprehensive up to date review of the entire field All areas of exoplanet investigation are covered making it a unique and valuable guide for researchers in astronomy and planetary science including those new to the field It treats the many different techniques now available for exoplanet detection and characterisation the broad range of underlying physics the overlap with related topics in solar system and Earth sciences and the concepts underpinning future developments It emphasises the interconnection between the various fields and provides extensive references to more in depth treatments and reviews **NOAO-NSO Newsletter** , 2006 Surface-Based Remote Sensing of the Atmospheric Boundary Layer

Stefan Emeis,2010-09-08 The book presents a comprehensive overview of the current state of the art in the atmospheric boundary layer ABL research It focuses on experimental ABL research while most of the books on ABL discuss it from a theoretical or fluid dynamics point of view Experimental ABL research has been made so far by surface based in situ experimentation tower measurements up to a few hundred meters surface energy balance measurements short aircraft experiments short experiments with tethered balloons constant level balloons evaluation of radiosonde data Surface flux measurements are also discussed in the book Although the surface fluxes are one of the main driving factors for the daily variation of the ABL an ABL description is only complete if its vertical structure is analyzed and determined Satellite information is available covering large areas but it has only limited temporal resolution and lacks sufficient vertical resolution Therefore surface based remote sensing is a large challenge to enlarge the database for ABL studies as it offers nearly continuous and vertically highly resolved information for specific sites of interest Considerable progress has been made in the recent years in studying of ground based remote sensing of the ABL The book discusses such new subjects as micro rain radars and the use of ceilometers for ABL profiling modern small wind lidars for wind energy applications ABL flux profile measurements RASS techniques and mixing layer height determination MCITP Administrator Microsoft SQL Server 2005 Optimization and Maintenance Study Guide Victor Isakov, Marilyn Miller-White, J. Symposium, 2008-07-10 In the 12 years since the first discovery of an exoplanet around a main sequence star 51 Peg more than 270 exoplanets have been detected The proceedings of IAU Symposium 249 present the latest theoretical and observational advances in the field of exoplanet research including the ongoing and future projects such as CoRoT and Kepler The volume opens with a review of exoplanet detection and orbital determination techniques before looking at the physics of gas giant atmospheres and close in stars The topics of planet formation migration and the dynamical evolution of protoplanetary disks and multi planet systems are also covered in detail IAU S249 is a useful reference for the graduate students and researchers working in the exciting field of exoplanet study **The Psychology of Love and Hate in Intimate Relationships** Katherine Aumer, 2016-06-23 Social psychology has made great advancements in understanding how our romantic relationships function and to some extent dissolve However the social and behavioral sciences in much of western scholarship often focus exclusively on the more positive aspects of intimate relationships and less so on more controversial or unconventional aspects The goal of this volume is to explore and

illuminate some of these underrepresented aspects such as non monogamy female orgasm sadism and hate that often function alongside love in intimate relationships Ultimately by looking at intimate relationships in this way the volume contributes to and advocates for a more holistic and comprehensive view of intimate relationships Throughout the volume contributors from social clinical and evolutionary psychology cover love and hate from a variety of sometimes opposing perspectives The first section covers love and the changing landscape of intimate relationships Its chapters review the current literature and research of understudied topics like non monogamy female orgasm sexual fantasies and the viewpoint of love as something other than positive The second section explores hate and how hate can operate in intimate relationships for example the appearance of sadistic behavior and debates the nature of hate as either a motivation or emotion The volume concludes by looking at ways in which the appearance of hate in relationships can be dealt with and overcome successfully Taken together these two sections reflect the full variety of experiences within intimate relationships With the aim of exploring how love and hate can and frequently do work together *The Psychology of Love and Hate in Intimate Relationships* is a fascinating psychological exploration of intimate relationships in modern times It is an invaluable resource to academics and students specializing in psychology gender and sociology including clinicians and therapists and all those interested in increasing our knowledge of intimate relationships

Constraints in Discourse Anton Benz, Peter Kühnlein, 2008 It is a commonplace to say that the meaning of text is more than the conjunction of the meaning of its constituents But what are the rules governing its interpretation and what are the constraints that define well formed discourse Answers to these questions can be given from various perspectives In this edited volume leading scientists in the field investigate these questions from structural cognitive and computational perspectives The last decades have seen the development of numerous formal frameworks in which the structure of discourse can be analysed the most important of them being the Linguistic Discourse Model Rhetorical Structure Theory and Segmented Discourse Representation Theory This volume contains an introduction to these frameworks and the fundamental topics in research about discourse constraints Thus it should be accessible to specialists in the field as well as advanced graduate students and researchers from neighbouring areas The volume is of interest to discourse linguists psycholinguists cognitive scientists and computational
