The Transitional Form Dilemma By Harun Yahya:

Atlas of Creation Harun Yahya, 2006 Some 150 years ago the British naturalist Charles Darwin proposed a theory based on various observations made during his travels but which could not be supported by any subsequent scientific findings In essence his theory of evolution consisted of various scenarios assumptions and conjectures that Darwin dreamed up in his own imagination According to his evolution scenario inanimate substances came together by chance to give rise to the first living cell No doubt this claim was highly inaccurate and one that could not be corroborated by any scientific evidence or findings Again according to that myth this single celled life form gradually and again by chance turned into the first living species of microbe in other words it evolved According to the evolution error all the life forms on Earth from bacteria on up to human beings emerged as the result of this same imaginary process Darwin s claims were of course based on no scientific evidence or findings But since the scientific understanding and technological means available at the time were at a fairly primitive level the full extent of the ridiculous and unrealistic nature of his assertions did not emerge fully into the light of day In such a climate Darwin s scenarios received general acceptance from a wide number of circles Publisher Divine Action and Natural Selection Joseph Seckbach, Richard Gordon, 2009 The debate between divine action or faith and natural selection or science is garnering tremendous interest This book ventures well beyond the usual contrasting American Protestant and atheistic points of view and also includes the perspectives of Jews Muslims and Roman Catholics It contains arguments from the various proponents of intelligent design creationism and Darwinism and also covers the sensitive issue of how to incorporate evolution into the secondary school biology curriculum Comprising contributions from prominent award winning authors the book also contains dialogs following each chapter to provide extra stimulus to the readers and a full picture of this hot topic which delves into the fundamentals of science and religion The New York Times Index , 2007
