**PDE-constrained Optimization** Lorenz T. Biegler, Omar Ghattas, Matthias Heinkenschloss, David Keyes, Bart van Bloemen Waanders, 2007-01-01 Many engineering and scientific problems in design, control and parameter estimation can be formulated as optimization problems that are governed by partial differential equations (PDEs). The complexities of the PDEs and the requirement for rapid solution pose significant difficulties. A particularly challenging class of PDE constrained optimization problems is characterized by the need for real time solution, i.e. in time scales that are sufficiently rapid to support simulation based decision making. Real Time PDE Constrained Optimization, the first book devoted to real time optimization for systems governed by PDEs, focuses on new formulations, methods and algorithms needed to facilitate real

time PDE constrained optimization In addition to presenting state of the art algorithms and formulations the text illustrates these algorithms with a diverse set of applications that includes problems in the areas of aerodynamics biology fluid dynamics medicine chemical processes homeland security and structural dynamics Audience readers who have expertise in simulation and are interested in incorporating optimization into their simulations who have expertise in numerical optimization and are interested in adapting optimization methods to the class of infinite dimensional simulation problems or who have worked in offline optimization contexts and are interested in moving to online optimization
