**Conceptual Representation** Helen Moss, James Hampton, James A. Hampton, 2003 This special issue on conceptual representation contains invited papers from leading researchers across the range of cognitive science disciplines addressing the nature of semantic and conceptual representation in the mind and brain

**The Conceptual Mind** Eric Margolis, Stephen Laurence, 2015-05-08 The study of concepts has advanced dramatically in recent years with exciting new findings and theoretical developments Core concepts have been investigated in greater depth and new lines of inquiry have blossomed with researchers from an ever broader range of disciplines making important contributions In this volume leading philosophers and cognitive scientists offer original essays that present the state of the art in the study of concepts These essays all commissioned for this book do not merely present the usual surveys and overviews rather they offer the latest work on concepts by a diverse group of theorists as well as discussions of the ideas that should guide research over the next decade

Abstract Concepts and the Embodied Mind Guy Dove, 2022-07-08 We appear to think about the world by means of the same mechanisms that we use to experience it Yet abstract concepts like democracy fermion piety truth and zero represent a clear challenge to this idea In Abstract Concepts and the Embodied Mind Guy Dove contends that abstract concepts are heterogeneous and pose three important challenges to embodied cognition They force us to ask How do we generalize beyond the specifics of our experience How do we think about things that we do not experience directly How do we adapt our thoughts to specific contexts and tasks He further argues that a successful theory of grounding must embrace multimodal representations hierarchical architecture and linguistic scaffolding

Morrison, 2013-05-23 The Oxford Handbook of Thinking and Reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most comprehensive overview of research on thinking and reasoning that has ever been available

**The Organisation of Conceptual Knowledge in the Brain** Alex Martin, Alfonso Caramazza, 2003 Category specific knowledge disorders are among the most intriguing and perplexing syndromes in cognitive neuropsychology The past decade has witnessed increased interest in these disorders due largely to a heightened appreciation of the profound implications that an understanding of concept representation has for such diverse topics as object recognition the organisation of the lexicon and storage of long term memories Until recently information about the representation of concepts was limited to findings from patients with brain injury and disease This state of affairs has now changed with the advent and wide spread availability of functional imaging for studying cognition in the normal human brain The purpose of this special issue is to provide a forum for new findings and critical theoretical analyses of existing data from patient and functional brain imaging studies The contributions all from major investigators in the field range from studies of specific object categories such as animals tools fruit and vegetables and faces to the more general domains of number processing social interaction and mechanical knowledge A unifying theme of these papers is the extent to which the findings can be best understood within the context of models that posit an innate domain specific organisation those that appeal to an organisation by sensory and motor based features and properties and those that propose an undifferentiated distributed neural organisation

**Encyclopedia of the Mind** Harold Pashler, 2013-01-14 It's hard to conceive of a topic of more broad and personal interest than the study of the mind In addition to its traditional investigation by the disciplines of psychology psychiatry and neuroscience the mind has also been a focus of study in the fields of philosophy economics anthropology linguistics computer science molecular biology education and literature In all these approaches there is an almost universal fascination with how the mind works and how it affects our lives and our behavior Studies of the mind and brain have crossed many exciting thresholds in recent years and the study of mind now represents a thoroughly cross disciplinary effort Researchers from a wide range of disciplines seek answers to such questions as What is mind How does it operate What is consciousness This encyclopedia brings together scholars from the entire range of mind related academic disciplines from across the arts and humanities social sciences life sciences and computer science and engineering to explore the multidimensional nature of the human mind

*Forms of Representation in the Aristotelian Tradition. Volume Three: Concept Formation*, 2022-04-11 The trilogy *Forms of Representation in the Aristotelian Tradition* investigates how Aristotle and his ancient and medieval successors understood the relation between the external world and

the human mind It gives an equal footing to the three most influential linguistic traditions Greek Latin and Arabic and offers insightful interpretations of historical theories of perception dreaming and thinking This final volume focuses on intellectual operations and analyses some of the most exciting issues pertaining to the conceptual representation of the external world The contributions cover the historical traditions and their impact on contemporary philosophy of mind *Mind Readings* Paul Thagard,1998-04-09 Mind Readings is a collection of accessible readings on some of the most important topics in cognitive science Although anyone interested in the interdisciplinary study of mind will find the selections well worth reading they work particularly well with Paul Thagard s textbook Mind An Introduction Cognitive Science and provide further discussion on the major topics discussed in that book The first eight chapters present approaches to cognitive science from the perspective that thinking consists of computational procedures on mental representations The remaining five chapters discuss challenges to the computational representational understanding of mind Contributors John R Anderson Ruth M J Byrne E H Durfee Chris Eliasmith Owen Flanagan Dedre Gentner Janice Glasgow Philip N Johnson Laird Alan Mackworth Arthur B Markman Douglas L Medin Keith Oatley Dimitri Papadias Steven Pinker David E Rumelhart Herbert A Simon

M. Kommers,2004 This book addresses the various aspects of computational support systems for learners nowadays It highlights in particular those learning aspects that rely heavily upon one s imagination of knowledge and new ideas The question is how learners may become more effective through the use of highly graphical computer systems that now conquer almost every desk As an

extrapolation of the constructionistic paradigm learning is seen here as a process of conceptual design Witnessing the prudent introduction of CADD software Computer Aided Drafting and Design it is obvious that users are generally scrupulous to accept the computer in the ideational stages of design This book presents both existing conceptual techniques and those estimated to arrive in the few coming years *Accessing Conceptual Representations for Speaking* Peter Indefrey, Ian FitzPatrick, 2016-10-31 For speaking words in the lexicon are somehow activated from conceptual representations but we know surprisingly little about how this works precisely Which of the attributes of the concept DOG e g BARKS IS WALKED WITH A LEASH CARNIVORE ANIMATE have to be activated in a given situation to be able to select the word dog Are there things we know about dogs that are always activated for naming and others that are only activated in certain contexts or even never To date investigations on lexical access in speaking have largely focused on the effects of distractor nouns on the naming latency of a target noun We have learned that distractors from the same semantic category e g cat hinder naming but associatively related distractors leash may facilitate or hinder naming However associatively related words can have all kinds of semantic relationships to a target word and with few exceptions the effects of specific semantic relationships other than membership in the same category as the target concept have not been systematically investigated This special issue aims at moving forward towards a more detailed account of how precisely conceptual information is used to access the lexicon in speaking and what corresponding format of conceptual representations needs to be assumed *Handbook of Research on Science Education, Volume II* Norman G. Lederman, Sandra K. Abell, 2014-07-11 Building on the foundation set in Volume I a landmark synthesis of research in the field Volume II is a comprehensive state of the art new volume highlighting new and emerging research perspectives The contributors all experts in their research areas represent the international and gender diversity in the science education research community The volume is organized around six themes theory and methods of science education research science learning culture gender and society and science learning science teaching curriculum and assessment in science science teacher education Each chapter presents an integrative review of the research on the topic it addresses pulling together the existing research working to understand the historical trends and patterns in that body of scholarship describing how the issue is conceptualized within the literature how methods and theories have shaped the outcomes of the research and where the strengths weaknesses and gaps are in the literature Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research the Handbook of Research on Science Education Volume II is an essential resource for the entire science education community

**The Metaphorical Brain** Seana Coulson,Vicky T. Lai,2016-03-09 Metaphor has been an issue of intense research and debate for decades see for example 1 Researchers in various disciplines including linguistics psychology computer science education and philosophy have

developed a variety of theories and much progress has been made 2 For one metaphor is no longer considered a rhetorical flourish that is found mainly in literary texts Rather linguists have shown that metaphor is a pervasive phenomenon in everyday language a major force in the development of new word meanings and the source of at least some grammatical function words 3 Indeed one of the most influential theories of metaphor involves the suggestion that the commonality of metaphoric language results because cross domain mappings are a major determinant in the organization of semantic memory as cognitive and neural resources for dealing with concrete domains are recruited for the conceptualization of more abstract ones 4 Researchers in cognitive neuroscience have explored whether particular kinds of brain damage are associated with metaphor production and comprehension deficits and whether similar brain regions are recruited when healthy adults understand the literal and metaphorical meanings of the same words see 5 for a review Whereas early research on this topic focused on the issue of the role of hemispheric asymmetry in the comprehension and production of metaphors 6 in recent years cognitive neuroscientists have argued that metaphor is not a monolithic category and that metaphor processing varies as a function of numerous factors including the novelty or conventionality of a particular metaphoric expression its part of speech and the extent of contextual support for the metaphoric meaning see e g 7 8 9 Moreover recent developments in cognitive neuroscience point to a sensorimotor basis for many concrete concepts and raise the issue of whether these mechanisms are ever recruited to process more abstract domains 10 This Frontiers Research Topic brings together contributions from researchers in cognitive neuroscience whose work involves the study of metaphor in language and thought in order to promote the development of the neuroscientific investigation of metaphor Adopting an interdisciplinary perspective it synthesizes current findings on the cognitive neuroscience of metaphor provides a forum for voicing novel perspectives and promotes avenues for new research on the metaphorical brain 1
