Airline Operations And Scheduling:

Airline Operations and Scheduling Massoud Bazargan, 2016-03-23 Operations research techniques are extremely important tools for planning airline operations. However, much of the technical literature on airline optimization models is highly specialized and accessible only to a limited audience. Allied to this, there is a concern among the operations research community that the materials offered in OR courses at MBA or senior undergraduate business level are too abstract, outdated, and at times irrelevant to today's fast and dynamic airline industry. This book demystifies the operations and scheduling environment, presenting simplified and easy-to-understand models applied to straightforward and practical examples. After introducing the key issues confronting operations and scheduling within airlines, *Airline Operations and Scheduling* goes on to provide an objective review of the various optimization models adopted in practice. Each model provides airlines with efficient solutions to a range of scenarios and is accompanied by case studies similar to those experienced by commercial airlines. Using unique source material and combining interviews with alumni working at operations and scheduling departments of various airlines, this solution-oriented approach has been used on many courses with outstanding feedback. As well as having been comprehensively updated, this second edition of *Airline Operations and Scheduling* adds new chapters on fuel management systems, baggage handling, aircraft maintenance planning, and aircraft boarding strategies. The readership includes graduate and undergraduate business management, transportation, and engineering students; airlines training and acquainting new recruits with operations planning and scheduling processes; general aviation flight school; International Air Transport Association (IATA) and International Civil Aviation Organization (ICAO) training course instructors; executive jet, chartered flight, air cargo, and package delivery companies; and airline consultants.

M. Castro, Ana Paula Rocha, Eugénio Oliveira, 2014-06-19 Most of the research efforts dealing with airline scheduling have been done on off line plan optimization. However nowadays with the increasingly complex and huge traffic at airports the real challenge is how to react to unexpected events that may cause plan disruptions leading to flight delays. Moreover these disruptive events usually affect at least three different dimensions of the situation: the aircraft assigned to the flight, the crew assignment and often forgotten the passengers journey and satisfaction. This book includes answers to this challenge and proposes the use of the Multi agent System paradigm to rapidly compose a multi faceted solution to the disruptive event taking into consideration possible preferences of those three key aspects of the problem. Negotiation protocols taking place between agents that are experts in solving the different problem dimensions, combination of different utility functions and not less important the inclusion of the human in the automatic decision making loop make MASDIMA the system described in this book well suited for real life plan disruption management applications. Mathematical Models for Flight Scheduling in Airline Operations Joost Adriaan van Hamel, 1964 **Corporate Governance, Sustainability, and Information Systems in the Aviation Sector, Volume I** Kasım Kiracı, Kıymet Tunca Çalıyurt, 2022-10-26 This book delves into corporate governance, sustainability and information systems related to the aviation sector. Due to globalization and rise in cross border business the aviation sector has become an essential means of transport. However the industry has tremendous impact on social, economic and natural environments and carries significant risks. The book explores such issues plaguing the aviation sector under three key areas: CSR and sustainability, information systems and risk management and corporate governance and accountability in the airline industry. The book concludes with an analysis of the impact of COVID 19 crisis on the industry and ways to respond and recover from the effects of the pandemic.
