addition to insect vectors of diseases The need for an appreciation of the differentiation processes controlling growth and development of plant galls has been adequately emphasised these galls representing highly regulated growth manifestations of plants ensuring nutrition and shelter for the insects concerned Behavioural shifts of insects due to current climatic changes and their implications in insect conservation and control are also highlighted This book will be relevant to the undergraduate and particularly graduate students taking courses in insect ecology and evolution conservation biology and environmental management as well as to committed researchers in these fields in addition to conservation practitioners eager to have a comprehensive background of the multifaceted aspects of insect behavioural dynamics *Ecological Entomology: Insect Life in Odd Environments* T.N. Ananthakrishnan, K.G. Sivaramakrishnan, 2017-04-01 One of the principal aims in writing this book pertains to the increasing impact of human influence on natural habitats in recent years more notably to the loss of habitat quality Increased urbanization considerable reduction in natural forest areas changing ecology of fresh water ecosystems lakes and wet lands besides changing microhabitats have had their impact on insect populations A wide range of responses exist among several species of insects living in these changing environments more especially landscape dynamics creating a shifting mosaic of habitats Sudden changes in the extent or quality of habitat tend to influence the behaviour reproduction and survival of individuals In very rare cases the existence of a particular species depends on the presence of some other species not to mention of the extinction of food chains As such a basic understanding of the nature of habitat loss and fragmentation and their impact on insect species dynamics become important Numerous questions are raised about patterns and timing of the evolution of insect plant association which are essential for an understanding as to why the world is the world as it is today In this effort several specialists on diverse aspects have generously rendered assistance through providing literature and photographs and while appreciating their generosity we would like to thank them individually for all the assistance rendered without which the production of this volume would be impossible Principles of Insect Behaviour, 2nd Ed. V.B. Awasthi, 2013-07-01 The aim of writing this book has been to provide an account of the principles of insect behaviour for the post graduate students of Entomology and general Zoology of all the Universities and Research Institutions as well as to the research scholars engaged in the study of different aspects of Insect behaviour It is also useful to general readers who have basic knowledge of Biology and have curiosity to know why the insects are vividly coloured have peculiar shapes produce sound and light how they communicate and why bees and wasps sting when disturbed Significance of insects in pollination of plants associated with the production of seeds grains and fruits the role of hormones pheromones and other chemicals controlling various vital events of the insect behaviour has also been described The importance of insect migration control of insect pests by behavioural means has also been discussed Thus this book deals with almost all major aspects of insect behaviour It is hoped that this book will be useful not only to the students of Entomology Zoology and research scholars of insect behaviour but also to naturalists who wish to know about some of the
