Albert Einstein Mileva Maric The Love Letters:

Albert Einstein, Mileva Maric Albert Einstein, 2020-06-30 In 1903 despite the vehement objections of his parents Albert Einstein married Mileva Maric the companion colleague and confidante whose influence on his most creative years has given rise to much speculation Beginning in 1897 after Einstein and Maric met as students at the Swiss Federal Polytechnic and ending shortly after their marriage these fifty four love letters offer a rare glimpse into Einstein's relationship with his first wife while shedding light on his intellectual development in the period before the annus mirabilis of 1905 Unlike the picture of Einstein the lone isolated thinker of Princeton he appears here both as the burgeoning enfant terrible of science and as an amorous young man beset along with his fiancée by financial and personal struggles among them the illegitimate birth of their daughter whose existence is known only by these letters Describing his conflicts with professors and other scientists his arguments with his mother over Maric and his difficulty obtaining an academic position after graduation the letters enable us to reconstruct the youthful Einstein with an unprecedented immediacy His love for Maric whom he describes as a creature who is my equal and who is as strong and independent as I am brings forth his serious as well as playful often theatrical nature After their marriage however Maric becomes less his intellectual companion and failing to acquire a teaching certificate she subordinates her professional goals to his In the final letters Einstein has obtained a position at the Swiss Patent Office and mentions their daughter one last time to his wife in Hungary where she is assumed to have placed the girl in the care of relatives Informative entertaining and often very moving this collection of letters captures for scientists and general readers alike a little known yet crucial period in Einstein's life [The Einstein Family](#)

Einstein's Miraculous Year Albert Einstein, 2021-05-11 Five extraordinary papers by Albert Einstein that transformed physics edited and introduced by John Stachel and with a foreword by Nobel laureate Roger Penrose After 1905 Einstein's miraculous year physics would never be the same again In those twelve months Einstein shattered many cherished scientific beliefs with five extraordinary papers that would establish him as the world's leading physicist This book brings those papers together in an accessible format The best known papers are the two that founded special relativity On the Electrodynamics of Moving Bodies and Does the Inertia of a Body Depend on Its Energy Content In the former Einstein showed that absolute time had to be replaced by a new absolute the speed of light In the second he asserted the equivalence of mass and energy which would lead to the famous formula $E = mc^2$ The book also includes On a Heuristic Point of View Concerning the Production and Transformation of Light in which Einstein challenged the wave theory of light suggesting that light could also

be regarded as a collection of particles This helped to open the door to a whole new world that of quantum physics For ideas in this paper he won the Nobel Prize in 1921 The fourth paper also led to a Nobel Prize although for another scientist Jean Perrin On the Movement of Small Particles Suspended in Stationary Liquids Required by the Molecular Kinetic Theory of Heat concerns the Brownian motion of such particles With profound insight Einstein blended ideas from kinetic theory and classical hydrodynamics to derive an equation for the mean free path of such particles as a function of the time which Perrin confirmed experimentally The fifth paper A New Determination of Molecular Dimensions was Einstein's doctoral dissertation and remains among his most cited articles It shows how to calculate Avogadro's number and the size of molecules These papers presented in a modern English translation are essential reading for any physicist mathematician or astrophysicist Far more than just a collection of scientific articles this book presents work that is among the high points of human achievement and marks a watershed in the history of science Coinciding with the 100th anniversary of the miraculous year this new paperback edition includes an introduction by John Stachel which focuses on the personal aspects of Einstein's youth that facilitated and led up to the miraculous year

Einstein's Pathway to the Special Theory of Relativity Galina Weinstein, 2015-06-18 This book pieces together the jigsaw puzzle of Einstein's journey to discovering the special theory of relativity Between 1902 and 1905 Einstein sat in the Patent Office and may have made calculations on old pieces of paper that were once patent drafts One can imagine Einstein trying to hide from his boss writing notes on small sheets of paper and according to reports seeing to it that the small sheets of paper on which he was writing would vanish into his desk drawer as soon as he heard footsteps approaching his door He probably discarded many pieces of papers and calculations and flung them in the waste paper basket in the Patent Office The end result was that Einstein published nothing regarding the special theory of relativity prior to 1905 For many years before 1905 he had been intensely concerned with the topic in fact he was busily working on the problem for seven or eight years prior to 1905 Unfortunately there are no surviving notebooks and manuscripts no notes and papers or other primary sources from this critical period to provide any information about the crucial steps that led Einstein to his great discovery In May 1905 Henri Poincaré sent three letters to Hendrik Lorentz at the same time that Einstein wrote his famous May 1905 letter to Conrad Habicht promising him four works of which the fourth one Relativity was a rough draft at that point In the May 1905 letters to Lorentz Poincaré presented the basic equations of his 1905 Dynamics of the Electron meaning that at this point Poincaré and Einstein both had drafts of papers relating to the principle of relativity The book discusses Einstein's and Poincaré's creativity and the process by which their ideas developed The book also explores the misunderstandings and paradoxes apparent in the theory of relativity and unravels the subtleties and creativity of Einstein

Einstein in Love Dennis Overbye, 2001-10-01 In Einstein in Love Dennis Overbye has written the first profile of the great scientist to focus exclusively on his early adulthood when his major discoveries were made It reveals Einstein to be very much a young man of his time draft dodger self-styled bohemian poet violinist and cocky charismatic

genius who left personal and professional chaos in his wake Drawing upon hundreds of unpublished letters and a decade of research Einstein in Love is a penetrating portrait of the modern era s most influential thinker **Invisible Cloak - Know Thyself! The Woven Thought Design** Ute Sonja Medley,2007-10 The author demonstrates a repeating pattern in the lives of renowned personalities and shows the connecting links to their actual life experiences In addition she shows the correlation between metaphysical attributes of numbers and corresponding manifested matter the chemical elements with their unique properties and chemical reactions **The Einstein Family Correspondence Including the Albert Einstein-Mileva Marić Love Letters** Christie's East,1996
