*Fuzzy Logic and Information Fusion* Tomasa Calvo Sánchez, Joan Torrens Sastre, 2016-05-10. This book offers a timely report on key theories and applications of soft computing. Written in honour of Professor Gaspar Mayor on his 70th birthday, it primarily focuses on areas related to his research including fuzzy binary operators, aggregation functions, multi-distances and fuzzy consensus decision models. It also discusses a number of interesting applications such as the implementation of fuzzy mathematical morphology based on Mayor Torrens  $t$  norms. Importantly, the different chapters authored by leading experts present novel results and offer new perspectives on different aspects of Mayor's research. The book also includes an overview of evolutionary fuzzy systems, a topic that is not one of Mayor's main areas of interest, and a final chapter written by the Spanish pioneer in fuzzy logic, Professor E. Trillas. Computer and decision scientists, knowledge engineers and mathematicians alike will find here an authoritative overview of key soft computing concepts and techniques.

*Recent Advances in Intelligent Engineering Systems* János Fodor, Ryszard Klempous, Carmen Paz Suárez Araujo, 2011-09-25. This volume is a collection of 19 chapters on intelligent engineering systems written by respectable experts of the fields. The book consists of three parts. The first part is devoted to the foundational aspects of computational intelligence. It consists of 8 chapters that include studies in genetic algorithms, fuzzy logic connectives, enhanced intelligence in product models, nature inspired optimization technologies, particle swarm optimization, evolution algorithms, model complexity of neural networks and fitness landscape analysis. The second part contains contributions to intelligent computation in networks presented in 5 chapters. The covered subjects include the application of self-organizing maps for early detection of denial of service attacks, combating security threats via immunity and adaptability in cognitive radio networks, novel modifications in WSN network design for improved SNR and reliability, a conceptual framework for the design of audio based cognitive infocommunication channels and a case study on the advantages of fuzzy and anytime signal and image processing techniques. Computational intelligence represents a widely spread interdisciplinary research area with many applications in various disciplines including engineering, medicine, technology, environment, among others. Therefore, the third part of this book consists of 6 chapters on applications. This is a very important part of the volume because the reader can find in it a wide range of fields where computational intelligence plays a significant role.
