Environmental science is concerned with the investigation of pollution and degradation of the natural world including the study of the processes that pollute water, land, air, soil, and living things. We can use it as a benchmark for a natural environment that is free from danger and in good health. iv Safe drinking water, clean living circumstances, pure air, fertile land, nutritious food, and progress are all topics covered. Dimensions of environmental protection management such as sustainable environmental law, environmental management, environmental protection, and environmental engineering are growing.
