Iterative Identification and Control Pedro Albertos, Antonio Sala Piqueras, 2002-06-20
Control P. Albertos Pérez, Doctor Antonio Sala, 2002-05-21 An exposition of the interplay between the modelling of dynamic systems and the design of feedback controllers based on these models The authors of individual chapters are some of the most renowned and authoritative figures in the fields of system identification and control design
Iterative Identification and Control Pedro Albertos, Antonio Sala Piqueras, 2012-12-06 An exposition of the interplay between the modelling of dynamic systems and the design of feedback controllers based on these models is the main goal of this book The combination of both subjects into a cohesive development allows the consistent treatment of both problems to yield powerful new tools for the improvement of system performance Central among the themes of this work is the observation that operation of a system in feedback with a controller exposes the areas in which the model fit is constraining the controller performance achieved The book presents new techniques for the understanding of the iterative improvement of performance through the successive fitting of models using closed loop data and the design of high performance controllers using these models The subject matter includes New approaches to understanding how to affect the fit of dynamical models to physical processes through the choice of experiments data pre filtering and model structure connections between robust control design methods and their dependency on the quality of model fit experimental design in which data collected in operation under feedback can reveal areas that limit the performance achieved iterative approaches to link these model fitting and control design phases in a cogent manner so as to achieve improved performance overall The authors of individual chapters are some of the most renowned and authoritative figures in the fields of system identification and control design
Identification and Control Ricardo S. Sánchez-Peña, Joseba Quevedo Casín, Vicenç Puig Cayuela, 2007-06-28 This book meets head on the difficulty of making practical use of new systems theory presenting a selection of varied applications together with relevant theory It shows how workable identification and control solutions can be derived by adapting and extrapolating from the theory Each chapter has a common structure a brief presentation of theory the description of a particular application experimental results and a section highlighting explaining and laying out solutions to the discrepancy between the theoretical and the practical

Strategies Wang Jianhong,Ricardo A. Ramirez-Mendoza,Ruben Morales-Menendez,2023-03-31 A key challenge in science and
engineering is to provide a quantitative description of the systems under investigation leveraging the noisy data collected
Such a description may be a complete mathematical model or a mechanism to return controllers corresponding to new
unseen inputs Recent advances in the theories are described in detail along with their applications in engineering The book
aims to develop model free system analysis and control strategies i e data driven control from theoretical analysis and
engineering applications based only on measured data The study aims to develop system identification and combination in
advanced control theory i e data driven control strategy as system and controller are generated from measured data directly
The book reviews the development of system identification and its combination in advanced control theory i e data driven
control strategy as they all depend on measured data Firstly data driven identification is developed for the closed loop
nonlinear system and model validation i e obtaining model descriptions from measured data Secondly the data driven idea is
combined with some control strategies to be considered data driven control strategies such as data driven model predictive
control data driven iterative tuning control and data driven subspace predictive control Thirdly data driven identification and
data driven control strategies are applied to interested engineering In this context the book provides algorithms to perform
state estimation of dynamical systems from noisy data and some convex optimization algorithms through identification and
control problems
