Department, 1945 Manual of Classification United States. Patent and Trademark Office, United States. Patent and
Trademark Office. Office of Documentation Planning, Support, and Control, 1994 Includes list of replacement pages **Area**
Array Interconnection Handbook Karl J. Puttlitz, Paul A. Totta, 2012-12-06 Microelectronic packaging has been recognized
as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth
century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated
circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM
we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way
was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen
for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s
Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick
film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family of ceramics with matching expansivity
to sili con and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper
multilevel submicron wiring Powerful server packages have been developed in which the combined chip and package copper
wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit delays through short
efficient interconnects **Manual of Classification** United States. Patent Office, 1969 Includes list of replacement pages
