Farm animal proteomics 2014 André de Almeida, Fabrizio Ceciliani, David Eckersall, Ingrid Miller, Jenny Renaut, Paola Roncada, Romana Turk, 2023-09-04 Proteomics is the large scale study of the proteome i e a set of proteins being expressed in a certain fluid tissue organ or organism The value of this advanced technology is being recognised in farm animal and veterinary sciences from farm to fork The potential of proteomics is unequivocal in holding a significant promise in applications such as vaccine

and drug development physiology toxicology animal product quality and food safety Proteomics has been growing steadily during the last 3 4 years and as time goes by proteomics based studies are more and more common not just to scientists but to the general public as well unravelling the full potential of this innovative technology This book reflects the will of a group of multi disciplinary scientists that merge innovation with excellence of research and to whom the dissemination of knowledge and discovery through cooperation is a key point It is of interest to scientists at the early stages of their careers as well as to researchers well established in the field and to whom proteomics may be the necessary next step towards more in depth research activities By providing a collection of diverse scientific interests Farm Animal Proteomics 2014 demonstrates the vitality of the area and the importance it holds to animal and food research to science industry government agencies the consumer and ultimately the society as a whole

Range and Animal Sciences and Resources Management - Volume II Victor R. Squires, 2010-07-07 Range and Animal Sciences and Resources Management is a component of Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Rangelands comprise over forty percent of the earth s land surface and as one of the most prevalent land systems on the planet rangelands are critical habitats for myriad plant and animal species and form many of the world s major watersheds Rangelands are categorized in two distinct ways a as a type of land or b a type of land use This theme with contributions from distinguished experts in the field discusses about Range and Animal Sciences and Resources Management in several related topics These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Probiotics Ray Fuller, 2012-12-06 In recent years the gastrointestinal microflora has featured strongly in scientific veterinary and medical research As a result it has become obvious that the gut microflora is an essential component of the healthy animal Not only is it involved in digestion of food it is essential for the optimal resistance to disease The first part of this book records the research that has been done on the factors affecting colonization of the gut and the effect that the flora has on the host animal The second part discusses the way in which this basic knowledge affects the choice of organism being used as a probiotic The evidence for the involvement of the gut microflora in the health and well being of the animal is incontrovertible but the development of probiotics has been largely empirical failing to capitalize on the relevant research data The bringing together of the basic information on gut microecology and the development of probiotic preparations is long overdue It is hoped that this exercise will result in a more scientific approach to probiotic development and the emergence of new and improved preparations for animals and man The authors involved are all experts in their field and I am greatly indebted to them for their contributions to the book

Ruckebusch,P. Thivend,2012-12-06 Two questions could not be avoided in the avant propos of this book i what is the importance to man of ruminant livestock and ii what results of practical relevance in the growing mountain of scientific verbiage could be found in the Proceedings of this Symposium Herbivores are an integral and critical part of the natural ecosystem which must be preserved because of their impact on human welfare Wh at makes ruminants especially important to man is that they can thrive on fibrous forage and are thus the only viable enterprise over much of the earth s surface where crop growing is impracti cable They contribute a wide array of products in addition to 50000 000 tonnes ofmeat 1977 and represent a capital reserve that can be drawn upon in times of emergency milk for example 450000000 tonnes can make the difference between subsistence and starvation About 60% of the world s meat and 80 % of the milk are produced by one third of the world ruminant population in the developed regions and as much as 99 % of the power for agriculture is provided by the ruminant population in developing countries For the next two decades a probable increase by 30 % for cattle and buffalo and more than 40 % for sheep and goats is expected by improving health fertility nutrition and genetic potential rather than feed resources **Neurological Research** National Institute of Neurological Diseases and Stroke,1969
