The Malthusian Moment Thomas Robertson, 2012-05-07 Although Rachel Carson's *Silent Spring* 1962 is often cited as the founding text of the U S environmental movement in *The Malthusian Moment* Thomas Robertson locates the origins of modern American environmentalism in twentieth century adaptations of Thomas Malthus's concerns about population growth For many environmentalists managing population growth became the key to unlocking the most intractable problems facing Americans after World War II everything from war and the spread of communism overseas to poverty race riots and suburban sprawl at home Weaving together the international and the domestic in creative new ways *The Malthusian Moment* charts the explosion of Malthusian thinking in the United States from World War I to Earth Day 1970 then traces the just as surprising decline in concern beginning in the mid 1970s In addition to offering an unconventional look at World War II and the Cold War through a balanced study of the environmental movement's most contentious theory the book sheds new light on some

of the big stories of postwar American life the rise of consumption the growth of the federal government urban and suburban problems the civil rights and women s movements the role of scientists in a democracy new attitudes about sex and sexuality and the emergence of the New Right

Consecrating Science Lisa H. Sideris, 2017-08-15 In *Consecrating Science* Lisa Sideris offers a searing critique of The New Cosmology a complex network of overlapping movements that claim to bring together science and spirituality all in the name of saving our planet from impending ecological collapse Highly regarded in many academic circles these movements have been endorsed by numerous prominent scholars scientists historians and educators Their express goal popularized in numerous books films TED talks YouTube videos podcasts and even introductory courses at places like Harvard or Washington University is to instill in readers and audiences a profound sense of being at home in the universe thereby fostering environmentally responsible behavior Whether promoted as The New Story The Universe Story or The Epic of Evolution they all offer humanity a new sacred story a common creation myth for modern times and for all people the evolutionary unfolding of the universe from the Big Bang to the present Evolutionary science and religious cosmology together at last But as Sideris shows however the New Cosmology actually underwrites a staggeringly anthropocentric vision of the world Instead of cultivating an ethic of respect for nature the project of consecrating science only increases human arrogance and indifference to nonhuman life Going back to the work of Rachel Carson and other naturalists the author shows how a sense of wonder rooted in the natural world and our own ethical impulses helps foster environmental attitudes and policies that protect our planet Provided by publishe

Ethics and Justice for the Environment Adrian Armstrong, 2012-05-31 Examining the issues of ethics and justice as they apply to the environment this book starts from the

observation that the parallel expositions of environmental ethics and environmental justice appear to have few points of contact Environmental justice is highly politicized and concerned with human access to the environment and the unequal exposure to environmental pollution It grew out of the US civil rights movement the liberal tradition of rights and Rawls description of justice as fairness It is thus almost exclusively anthropocentric and does not address the question of justice for the environment By contrast environmental ethical studies are a wide ranging collection of approaches that are concerned with caring for the earth and the justifications for it but rarely consider the issue of justice Although the two movements do not come together at the theoretical level they do so at the grass roots activist level An essential component of this study is thus to consider both the issues of grass roots action and the application of the methods to actual case studies This book finds a common ground between these two strands and so to develop a unified statement of justice for the environment that includes the insights of both approaches particularly based on the capability ideas of justice developed by Martha Nussbaum
