Africa's ICT Infrastructure Directions In Development:

Africa's ICT Infrastructure Vivien Foster, Cecilia Briceño-Garmendia, 2011-06-23 Africa's ICT Infrastructure reviews how the investment in the sector has been financed and how the structure of the market has changed since the liberalization process started. It looks at the role of both private and public institutions as sources of financing for the sector and charts the emergence of investors from developing countries in leading the expansion of the sector across the region. *Africa's Infrastructure* World Bank, 2009-12-01 Sustainable infrastructure development is vital for Africa's prosperity. And now is the time to begin the transformation. This volume is the culmination of an unprecedented effort to document, analyze and interpret the full extent of the challenge in developing Sub-Saharan Africa's infrastructure sectors. As a result, it represents the most comprehensive reference currently available on infrastructure in the region. The book covers the five main economic infrastructure sectors: information and communication technology, irrigation, power, transport, and water and sanitation. *Africa's Infrastructure: A Time for Transformation* reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the Infrastructure Consortium for Africa. It presents the findings of the Africa Infrastructure Country Diagnostic (AICD), a project launched following a commitment in 2005 by the international community after the G8 summit at Gleneagles, Scotland, to scale up financial support for infrastructure development in Africa. The lack of reliable information in this area made it difficult to evaluate the success of past interventions, prioritize current allocations, and provide benchmarks for measuring future progress, hence the need for the AICD. Africa's infrastructure sectors lag well behind those of the rest of the world, and the gap is widening. Some of the main policy-relevant findings highlighted in the book include the following: infrastructure in the region is exceptionally expensive, with tariffs being many times higher than those found elsewhere; inadequate and expensive infrastructure is retarding growth by 2 percentage points each year; solving the problem will cost over US\$90 billion per year, which is more than twice what is being spent in Africa today. However, money alone is not the answer. Prudent policies, wise management, and sound maintenance can improve efficiency, thereby stretching the infrastructure dollar. There is the potential to recover an additional US\$17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency. For example, improved revenue collection and utility management could generate US\$3.3 billion per year; regional power trade could reduce annual costs by US\$2 billion; and deregulating the trucking industry could reduce freight costs by one-half. So raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket. Finally, the power sector and fragile states represent particular challenges. Even if every efficiency in every infrastructure sector could be captured, a substantial funding gap of \$31 billion a year would remain. Nevertheless, the African people and economies cannot wait any longer. Now is the time to begin the transformation to sustainable development. **African Economic Outlook 2009 Country Notes: Volumes 1 and 2** OECD, African Development Bank, United Nations Economic Commission for Africa, 2009-12-04 The African Economic Outlook

2009 Country Notes volumes review the recent economic situation and predict the short term evolution of 47 African countries *Local Governance and ICTs in Africa* Timothy Mwololo Waema, T. M. Waema, Edith Ofwona Adera, 2011-08-11 With case studies from nine African countries this book provides a rich understanding of the status of e governance in Africa assesses the effects of information and communications technologies ICTs on local governance and offers a roadmap for policymakers decision makers and practitioners to implement and evaluate their own e local governance projects With governance high on the agenda in Africa many governments are using ICTs to introduce innovations in their structure practices and capacities as well as in the ways they use human capital and deliver services to citizens However the potential for e governance in Africa remains largely unexploited Progress requires infrastructure improvement the enactment of appropriate laws and policies and capacity and content development This book addresses the lack of evidence on ICTs in local governance in Africa and provides an important collection of studies and analyses on the transformative potential of ICT
