Processor and System-on-Chip Simulation Rainer Leupers, Olivier Temam, 2010-09-15 Simulation of computer architectures has made rapid progress recently The primary application areas are hardware software performance estimation and optimization as well as functional and timing verification Recent innovative technologies such as retargetable simulator generation dynamic binary translation or sampling simulation have enabled widespread use of processor and system on chip SoC simulation tools in the semiconductor and embedded system industries Simultaneously processor and SoC simulation is still a very active research area e g what amounts to higher simulation speed flexibility and accuracy speed trade offs This book presents and discusses the principle technologies and state of the art in high level hardware architecture simulation both at the processor and the system on chip level

Software and Compilers for Embedded Systems Andreas Krall, 2003-10-24 This volume contains the proceedings of

the 7th International Workshop on Software and Compilers for Embedded Systems SCOPES 2003 held in Vienna Austria September 24-26 2003 Initially the workshop was referred to as the International Workshop on Code Generation for Embedded Systems The first workshop took place in 1994 in Schloss Dagstuhl Germany From its beginnings the intention of the organizers was to create an atmosphere in which the researchers could participate actively in dynamic discussions and profit from the assembly of international experts in the field It was at the fourth workshop in St Goar Germany in 1999 that the spectrum of topics of interest for the workshop was extended and not only code generation but also software and compilers for embedded systems were considered The change in fields of interest led to a change of name and this is when the present name was used for the first time Since then SCOPES has been held again in St Goar Germany in 2001 Berlin Germany in 2002 and this year 2003 in Vienna Austria In response to the call for papers 43 very strong papers from all over the world were submitted The program committee selected 26 papers for presentation at SCOPES 2003 All submitted papers were reviewed by at least three experts in order to ensure the quality of the work presented at the workshop

Architecture Exploration for Embedded Processors with LISA Andreas Hoffmann, Heinrich Meyr, Rainer Leupers, 2013-06-29 Already today more than 90% of all programmable processors are employed in embedded systems This number is actually not surprising contemplating that in a typical home you might find one or two PCs equipped with high of embedded systems performance standard processors but probably dozens including electronic entertainment household and telecom devices each of them equipped with one or more embedded processors Moreover the electronic components of upper class cars incorporate easily over one hundred processors Hence efficient embedded processor design is certainly an area worth looking at The question arises why programmable processors are so popular in embedded system design The answer lies in the fact that they help to narrow the gap between chip capacity and designer productivity Embedded processors cores are nothing but one step further towards improved design reuse just along the lines of standard cells in logic synthesis and macrocells in RTL synthesis in earlier times of IC design Additionally programmable processors permit to migrate functionality from hardware to software resulting in an even improved reuse factor as well as greatly increased flexibility

Advances in Visual Computing Richard Boyle, Darko Koracin, Bahram Parvin, 2005-11-29 It is with great pleasure that I welcome you to Lake Tahoe for the 2005 International

Symposium on Visual Computing ISVC ISVC provides a common umbrella for the four main areas of visual computing vision graphics visualization and virtual reality The goal of ISVC is to provide a common forum for researchers scientists engineers and practitioners throughout the world to present their latest research findings ideas developments and applications in the broader area of visual computing The program consists of six oral sessions two poster sessions seven special tracks four keynote presentations and one invited presentation The response to the call for papers for the general ISVC 2005 sessions was very good We received over 110 submissions from which we accepted 33 papers for oral presentation and 26 papers for poster presentation Special track papers were solicited separately through the organizing and program committees of each track A total of 32 papers were accepted for inclusion in the special tracks All papers were reviewed with an emphasis on their potential to contribute to the state of the art in the field Selection criteria included accuracy and originality of ideas clarity and significance of results and presentation quality The review process was quite rigorous involving two or three independent double blind reviews followed by a one week discussion period During the discussion period we tried to correct anomalies and errors that might have existed in the initial reviews Despite our efforts we recognize that some papers worthy of inclusion may not have been included in the program We offer our sincere apologies to authors whose contributions might have been overlooked

I wish to thank everybody who submitted their work to ISVC 2005 for review
