**Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained

widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for *Mathematics Magazine* ,1976

*Student Success* Tim Walter, Al Siebert, Laurence N. Smith, 2000 Offers an introductory guide to college featuring exercises projects and self assessment quizzes that form the foundation of college and career skills **Basic Statistics for the Behavioral Sciences** Gary W. Heiman, 2003 Each statistical procedure in this text is presented in a conceptual intuitive manner to illustrate how it fills a need in the process Students anxious about math will benefit from a scaled back emphasis on the discipline plain language and a step by step approach that reintroduces reviews and reinforces procedures In addition references to psychology have been reduced to make the text more inclusive of all behavioral sciences The text has been revised to streamline the narrative without reducing content make presentations more concise and add more explanatory techniques Nearly all examples include specific variables and questions rather than generic data and most are taken from everyday life so that students gain an intuitive feel for the meaning of scores and develop an ability to think in statistical terms *Research in Education* ,1971-12 **Resources in Education** ,1993 The Laborer ,2001
