Mathematical Modeling and Control in Life and Environmental Sciences Sebastian Anița, Vincenzo Capasso, Simone Scacchi, 2024-04-29 This monograph explores the use of mathematical modeling and control theory in a variety of contemporary challenges in mathematical biology and environmental sciences Emphasizing an approach of learning by doing the authors focus on a set of significant case studies emerging from real world problems and illustrate how mathematical techniques and computational experiments can be employed in the search for sustainable solutions The following topics are extensively discussed

Eradicability and control of a paradigmatic epidemic model with a view to the existence of endemic states their stability and the existence of travelling waves A spatially structured epidemic model concerning malaria as an example of vector borne epidemics Optimal harvesting problems for space structured and age structured population dynamics Controlling epidemics in agriculture due to pest insects The role of predators as a possible biocontrol agent of epidemics in agriculture Control by taxation of the environmental pollution produced by human activities The originality of this text is in its leitmotif regional control along the principle of Think Globally Act Locally Indeed for example in many real spatially structured ecosystems it is practically impossible to control the relevant system by global interventions in the whole habitat Proofs are given whenever they may serve as a guide to the introduction of new concepts Each chapter includes a comprehensive description of the numerical methods used for the computational experiments and MATLAB codes for many of the numerical simulations are available for download Several challenging open problems are also provided to stimulate future research This text is aimed at mathematicians engineers and other scientists working in areas such as biology medicine and economics Graduate and advanced undergraduate students of a quantitative subject related to the analysis and applications of dynamical systems and their control will also find it to be a valuable resource

Challenges and Solutions of Oncological Hyperthermia Andras Szasz, 2020-04-02 The next generation of oncological hyperthermia involves the medical innovation of selectively heating up the malignant cells of the body in a controlled way The easily distinguishable biophysical and physiological characteristics of cancer cells and their immediate environment are the focus of the targeted energy delivery of this treatment This heterogenic heating concept breaks with the homogeneous nature of conventional hyperthermia where an isothermally equal temperature is applied to the large surface area of a solid tumor Due to its selectivity the new concept enables the usage of a significantly lower energy making it safer less toxic and easier to use This book shows the challenges

facing oncological hyperthermia and highlights clinical results obtained in various countries It also presents discussions about the theoretical basis of the method adding some technical discussions and clarifying the most difficult points of its design The contributions dealing with clinical results use state of art conventional therapies with complementary hyperthermia and show the advantages of such a combination

Guided Self-Organization: Inception Mikhail Prokopenko, 2013-12-19 Is it possible to guide the process of self organisation towards specific patterns and outcomes Wouldn't this be self contradictory After all a self organising process assumes a transition into a more organised form or towards a more structured functionality in the absence of centralised control Then how can we place the guiding elements so that they do not override rich choices potentially discoverable by an uncontrolled process This book presents different approaches to resolving this paradox In doing so the presented studies address a broad range of phenomena ranging from autopoietic systems to morphological computation and from small world networks to information cascades in swarms A large variety of methods is employed from spontaneous symmetry breaking to information dynamics to evolutionary algorithms creating a rich spectrum reflecting this emerging field Demonstrating several foundational theories and frameworks as well as innovative practical implementations Guided Self Organisation Inception

One New Humanity Kristin Caynor, Werner Mischke, 2025-04-01 Is Jesus the way to recover our humanity One New Humanity offers a vision of glory that confronts the shame and violence of our world Drawing insights from early Christians the global church

social sciences and Scripture the authors argue that Ephesians 2:13-17 reveals a social and horizontal dimension to the gospel of Christ. In Christ we gain a new peaceable way of being human. Through this extensive look at the gospel of peace we discover that Scripture speaks more powerfully than we often realize to the problems of polarization, alienation, shame, and violence. The gospel offers a way out of the cycles of violence which have entrapped both the church and the world and opens up a path of true freedom, purpose, and glory in Jesus. One New Humanity offers a fresh framework for Jesus-centered reconciliation; we embody Christ's peace for the world near and far.

Inflammation, Aging and Cancer Mahin Khatami, 2018-01-17. This book was prepared as an extension of the author's accidental discoveries on experimental models of acute and chronic ocular inflammatory diseases that were established at the University of Pennsylvania in 1980's. Analyses of original data suggest a series of first evidence for a direct link between inflammation and developmental phases of immune dysfunction in multistep tumorigenesis and angiogenesis. The only evidence presented on initial events for interactions and synergies between activated host and recruiting cells toward tumorigenesis. Effective immunity was defined as a balance between two highly regulated and biologically opposing arms: Yin and Yang of acute inflammation; an amazingly precise signal communications between immune and non-immune systems requiring differential bioenergetics. Unresolved inflammation is a common denominator mapping aging process and induction of mild, moderate, or severe immune disorders including cancers. Our knowledge of the fascinating biology of immunity in health or chronic diseases is fragmentary, chaotic, and confusing, particularly for cancer science. Lack of progress in curing majority of chronic diseases or cancer is primarily due to the fact that scientists work on isolated molecules, cells, or topics that are funded and promoted by decision makers in medical/cancer establishment. Despite existence of over 25 million articles on cancer-related topics, cancer biology and cure remain mysteries to be solved. After a century of cancer research, the failure rates of therapies for solid tumors are 90%. Current reductionist views on cancer science are irresponsible; shut down approaches and create chaos. Outcomes are loss of millions of precious lives and economic drain to society. Very little is known about initial events that disturb effective

immunity whose function is to monitor and arrest growth of cancerous cells or defend against other external or internal hazardous agents that threaten body's survival. The author demonstrates the serious need for systematic understanding of how immune disruptors and aging process would alter effective immunity. Outcomes of proposed orderly studies are expected to provide logical foundations for cost-effective strategies to promote immunity toward a healthier society. The policy makers and medical cancer establishment are urged to return to the common sense that our Forefathers used to serve the public.
