### Exercise One: (5 points)

Oocyte cryopreservation (Freezing) is a procedure used to preserve women's eggs (oocytes). This technique has been used to enable women to postpone pregnancy to a later date, whether for medical or social reasons. Document 1 shows the steps of oocyte cryopreservation.

- Describe, in a short text, the experiment presented in (Doc. 1).
- Formulate a hypothesis explaining the removal of 14 to 18 oocytes from the ovary at the same time.
- The removed oocytes are usually blocked at metaphase II; schematize the stages of oogenesis leading to the formation of these oocytes.

A woman decided to undergo Oocyte cryopreservation, doctors started by a normal check on the reproductive system. They were surprised that this woman suffers from a rare congenital condition called **Didelphys uterus**. Document 2 shows the reproductive system of this woman.

- Label the letters X, Y & Z, and indicate the role of each.
- Referring to document 2. Show that this condition is considered abnormal but does not prevent oocyte cryopreservation.
- In women, pregnancy is very rare after the age of 50. Explain based on the process of folliculogenesis how oocyte cryopreservation would solve this problem.

*Habits: plasticity, learning and freedom* Javier Bernacer,Jose Angel Lombo,Jose Ignacio Murillo,2015-11-05 In present times certain fields of science are becoming aware of the necessity to go beyond a restrictive specialization and establish an open dialogue with other disciplines Such is the case of the approach that neuroscience and philosophy are performing in the last decade However this increasing interest in a multidisciplinary perspective should not be understood in our opinion as a new phenomenon but rather as a return to a classical standpoint a proper understanding of human features organic cognitive volitional motor or behavioral for example requires a context that includes the global dimension of the human being We believe that grand neuroscientific conclusions about the mind should take into account what philosophical reflection has said about it likewise philosophers should consider the organic constitution of the brain to draw inferences about the mind Thus both neuroscience and philosophy would benefit from each other s achievements through a fruitful dialogue One of the main problems a multidisciplinary group encounters is terminology the same term has a different scope in various fields sometimes even contradictory Such is the case of habits from a neuroscientific perspective a habit is a mere automation of an action It is therefore linked to rigidity and limitation However from a classical philosophical account a habit is an enabling capacity acquired through practice which facilitates improves and reinforces the performance of certain kind of actions From neuroscience habit acquisition restricts a subject s action to the learnt habit from philosophy habit acquisition allows the subject to set a distance from the simple motor performance to cognitively enrich the action For example playing piano is a technical habit considering the neuroscientific account a pianist would just play those sequences of keystrokes that had been repeatedly practiced in the past However according to the philosophical perspective it would allow the pianist to improvise and moreover go beyond the movements of their hands to concentrate in other features of musical interpretation In other words a holistic view of habits focuses on the subject s disposition when facing both known and novel situations We believe neuroscience could contribute to achieve a deeper understanding of the neural bases of habits whose complexity could be deciphered by a philosophical reflection Thus we propose this Research Topic to increase our understanding on habits from a

wide point of view This collection of new experimental research empirical and theoretical reviews general commentaries and opinion articles covers the following subjects habit learning implicit memory computational and complex dynamical accounts of habit formation practical cognitive perceptual and motor habits early learning intentionality consciousness in habits performance neurological and psychiatric disorders related to habits such as obsessive compulsive disorder stereotypies or addiction habits as enabling or limiting capacities for the agent   **Abiotic Selection in Earth Surface Systems** Jonathan D. Phillips,2025-07-22 This book is about abiotic selection in Earth surface systems It demonstrates that seemingly purposeful or goal oriented phenomena in Earth's processes actually emerge from selection dynamics While many think of selection in the context of biological evolution it extends to abiotic processes crucial in understanding Earth's function and evolution The author delineates four forms of geophysical selection gradient resistance network and thermodynamic These selections manifest in various natural systems from fluid flows shaping landscapes to the efficient transport of mass and energy The book acknowledges the interplay of geophysical and ecological processes employing them as pedagogical tools Structured with an introduction to abiotic selection and its context the book delves into the application of key principles such as thermodynamics and flow dynamics to Earth surface systems Each subsequent chapter examines one of the four types of selection featuring diverse real world examples from climate dynamics to oceanography Geared toward researchers graduate students and practitioners in fields such as geophysics geology geography hydrology and ecosystem sciences it also appeals to those interested in evolutionary thinking beyond traditional life sciences

**Biodiversity** Edmundas Lekevičius,2022-09-20 Species are not functionally independent From a long term perspective only ecosystem with a fully integrated nutrient cycle is alive The lack of trophic autonomy should be considered one of the key factors that ensure and maintain biodiversity The variability of abiotic conditions both in space and in time also creates a huge diversity of niches and subniches for genotypes and species In addition life maintains its essential variables biomass and productivity as stable as possible due to the diversity of structures genes macromolecules metabolic pathways genotypes species etc the structures that reach optima are multiplied and thus activated while the functioning of those which lost their optima is suppressed The facts and concepts presented in this monograph thus support the conclusions that a genotype and species diversity is supported by trophic specialisation b biodiversity helps to stabilise the functions essential variables of individuals populations and ecological communities c in evolution the emergence of biodiversity is determined by heritable variation and the advantage of specialised more effective structures over non specialised ones d biodiversity is characterised by its ability to increase itself and to organise itself into relatively consistent structures which we call production pyramids and nutrient cycles This book therefore provides an answer to the question why the diversity of life is of such and such a nature

Mariannina Failla,Nuria Sánchez Madrid,2021-10-25 Kant's account of emotions has only recently begun to receive the attention that this topic deserves as it casts new light over the manifold features of transcendental philosophy. The authors expand the contemporary overview of the Kantian treatment from both a neuroscientific and a continental philosophical perspective. The volume opens paths to reevaluate neglected aspects of the Kantian model of human rationality.

**Biomarkers of Alzheimer's Disease: The Present and the Future** Sylvain

Lehmann,Charlotte Elisabeth Teunissen,2016-11-10 Alzheimer disease AD is a neurodegenerative disorder characterized by significant cognitive deficits behavioral changes sleep disorders and loss of functional autonomy. AD represents the main cause of dementia and has become a major public health issue. In addition the number of patients suffering from AD is growing rapidly as the population ages worldwide. Memory impairment is usually the earliest clinical and core symptom of this disease. The diagnosis at a late clinical stage is relatively easy. However a delay in the diagnosis is damageable for the handling of patients in terms of optimal medical and social care. The actual interest of the scientific head ways is to optimize the diagnosis in prodromal stage of the disease and to propose personalized therapeutic solutions to individual patients. New revised AD diagnostic criteria include early alteration of cerebrospinal fluid CSF biomarkers decrease of amyloid peptides A 42 and increase in tau and phosphorylated tau p tau protein concentration. This recognition of CSF biological biomarkers for the diagnosis of AD is a major step towards the molecular diagnosis and follow up of the disease. Many issues are however still subject of debate. This e book provides a comprehensive overview of the state of the art of fluid biomarkers for AD e.g. which novel biomarkers should be implemented in clinical practice for diagnosis or for monitoring treatment or side effects which ones are new for AD or related dementias or what is the potential of peripheral blood markers. Moreover the e Book provides practical guidelines how to optimally and efficiently develop and validate novel biomarker assays and to document and control pre analytical variation
