Chapter 1

Exercise 1.1

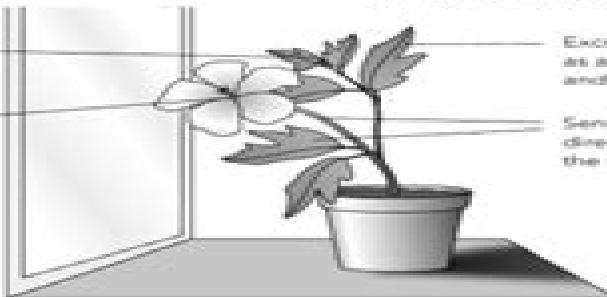

1

Term	Description
nutrition	making more of the same kind of organism
respiration	removing waste products of metabolism
growth	a permanent increase in size and dry mass
excretion	taking in materials for energy, growth and development
reproduction	chemical reactions that release energy from nutrient molecules

2

Growth – the plant makes new cells so it increases in size.

Reproduction – gametes are made in the flower, which fuse together to produce a zygote; this is sexual reproduction. (Note: If students have not previously studied reproduction, accept an answer that refers simply to reproduction as making more of the same species.)

Excretion – the plant makes oxygen as a waste product of photosynthesis, and loses it from its leaves.

Sensitivity – the plant senses the direction from which light comes, and the stem and leaves grow towards it.

- 3**
- Points that learners may make include:
- Birds are living things because they are able to carry out all seven characteristics: they can move of their own accord; they can reproduce; they respire; they are sensitive to changes in their environment; they grow; they excrete; they take in nutrients.
- Aeroplanes are able to move, and they also take in "nutrients", in the form of fuel. They combine oxygen with fuel to provide energy for their movement, which is similar to respiration, and this reaction produces waste products removed in the exhaust, which is similar to excretion. They have sensors that can detect and respond to changes in their environment – for example, they may have lights that come on automatically when light intensity in their surroundings falls below a particular level. However, aeroplanes do not grow, and they are not able to reproduce. Because aeroplanes are not able to carry out all seven characteristics, they are not alive.

Biology Workbook Answer Key Introductions To Plants:

Introductory Plant Biology Kingsley R. Stern, Shelley Jansky, James E. Bidlack, 2003 This introductory text assumes little prior scientific knowledge on the part of the student. It includes enough information for some shorter introductory botany courses open to majors and non-majors and is arranged so that sections can be omitted without disrupting the continuity of the course

Breakthrough to CLIL for Biology Age 14+ Workbook Matthew Broderick, Timothy Chadwick, 2015-10-29 A series of workbooks offering integrated content and language support for specific subjects. Evolutionary Biology and Ecology of Ostracoda David J. Horne,Koen Martens,2013-11-11 Ostracoda Crustacea are potentially excellent model organisms for evolutionary studies because they combine an extensive fossil record with a wide recent distribution and therefore allow studies on both patterns and processes leading to extant diversity The main scientific domains contributing theories concepts and data to evolutionary biology are morphology including ontogeny palaeontology genetics and ecology and to all of these aspects ostracods can contribute This is clearly illustrated by the fifteen papers presented under Theme 3 of the 13th International Symposium on Ostracoda Chatham UK in 1997 which are grouped in the present proceedings one of three volumes resulting from this meeting The contributions deal with the evolution of both extant and fossil forms including most of the Phanaerozoic ecology of both marine and freshwater taxa and developmental morphology of both soft parts and valves Although the canvas is wide each paper clearly shows how studies on Ostracoda can be relevant to general theory on evolutionary biology and ecology **Introduction to Green Chemistry** Albert Matlack,2001-04-03 With roughly 5500 references this book may be considered more of a treatise than a mere introduction

to green chemistry Using an unconventional approach the author provides a broad but thorough review of the subject covering traditional green chemistry topics such as catalysis benign solvents and alternative feedstocks before moving on to less frequently covered topics such as chemistry of longer wear and population and the environmental chemistry Topics such as these highlight the importance of chemistry to everyday life and demonstrate the real benefits that wider exploitation of green chemistry can have for society
