

Chapter 7 Aquatic Ecosystems

Section 1. Key Terms

1. **Wetland** – land that is periodically submerged or whose soil contains a great deal of moisture
2. **Plankton** – mass of mostly microscopic organisms that float or drift freely in the waters of aquatic environments
3. **Nekton** – all organisms that swim actively in open water, independent of currents
4. **Benthos** – organisms that live at the bottom of oceans or bodies of fresh water
5. **Littoral zone** – a shallow zone in a freshwater habitat where light reaches the bottom and nurtures plants
6. **Benthic zone** – the bottom region of oceans and bodies of fresh water
7. **Eutrophication** – an increase in the amount of nutrients, such as nitrate, from fertilizers, in a marine or aquatic environment

Section 1. Review Questions

1. List two factors that determine where an organism lives in an aquatic ecosystem. Answers may vary. On sample answer are temperature and nutrients; others are sunlight, oxygen
2. Compare the littoral zone of a lake with the benthic zone of a lake. The littoral zone exists in shallow, sunlit water, while the benthic zone occupies the dark bottom of a lake or pond.
3. List two environmental functions that wetlands provide. How do these functions affect you? Wetlands trap and filter pollutants, which improves water quality downstream. Wetlands also absorb excess water and reduce the likelihood of a flood. Wetlands buffer shorelines against erosion. Wetlands provide habitat for rare, threatened, and endangered species. They also provide recreational areas for activities such as watching, fishing, canoeing, photography and painting.
4. Describe one threat against river ecosystems. Answers will vary. One threat is sewage dumping. Runoff from the land can put pesticides and other poisons into rivers. Excess after the ecosystem is and around it then. People take water from the rivers to use in homes and manufacturing.
5. A piece of garbage that is thrown into a stream may end up in a river or an ocean. What effects might one piece of garbage have on an aquatic ecosystem? What effects might 100 pieces of garbage have on an aquatic ecosystem? Answers will vary. In general, more garbage will have more of a harmful effect on the ecosystem.
6. Write a short paragraph that explains how fertilizing your yard and applying pesticides can affect the health of a river ecosystem. Run-off can wash fertilizers and pesticides off my yard and into a river. Fertilizers can cause an increase in plant growth or an algal bloom. Pesticides can kill plants and animals in the river.
