The general concept of information is here for the first time defined mathematically by adding one single axiom to the probability theory This Mathematical Theory of Information is explored in fourteen chapters 1 Information can be measured in different units in anything from bits to dollars We will here argue that any measure is acceptable if it does not violate the Law of Diminishing Information This law is supported by two independent arguments one derived from the Bar Hillel ideal receiver the other is based on Shannon s noisy channel The entropy in the classical information theory is one of the measures conforming to the Law of Diminishing Information but it has however properties such as being symmetric which makes it unsuitable for some applications The measure reliability is found to be a universal information measure 2 For discrete and finite signals the Law of Diminishing Information is defined mathematically using probability theory and matrix algebra 3 The

Law of Diminishing Information is used as an axiom to derive essential properties of information Byron's law there is more information in a lie than in gibberish Preservation no information is lost in a reversible channel Etc The Mathematical Theory of Information supports colligation i.e. the property to bind facts together making two plus two greater than four Colligation is a must when the information carries knowledge or is a base for decisions In such cases reliability is always a useful information measure Entropy does not allow colligation *The Mono Basin Ecosystem* National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Environmental Studies and Toxicology, Mono Basin Ecosystem Study Committee, 1987-02-01 Mono Basin is a closed hydrologic basin spanning the border between California and Nevada Los Angeles has been diverting streams since 1941 that normally would flow into Mono Lake It has been predicted that continued diversion will have major ecological consequences for the natural resources of the Mono Basin National Forest Scenic Area This book studies the ecological risk assessment that considers the effects of water diversions on an inland saline lake It examines the hydrology of the Mono Basin investigates the lake's physical and chemical systems studies the biological relationships and predicts the effects of changes in lake levels on the ecosystem *The Universal Etymological English Dictionary* Nathan Bailey, 1731 Climatological Data, 1993
