The Biology of Human Survival Claude A. Piantadosi,2003-09-11 The range of environments in which people can survive is extensive yet most of the natural world cannot support human life *The Biology of Human Survival* identifies the key determinants of life or death in extreme environments from a physiologist s perspective integrating modern concepts of stress tolerance and adaptation into explanations of life under Nature s most austere conditions The book examines how

individuals survive when faced with extremes of immersion heat cold or altitude emphasizing the body's recognition of stress and the brain's role in optimizing physiological function in order to provide time to escape or to adapt In illustrating how human biology adapts to extremes the book also explains how we learn to cope by blending behavior and biology first by trial and error then by rigorous scientific observation and finally by technological innovation The book describes life support technology and how it enables humans to enter once unendurable realm from the depths of the ocean to the upper reaches of the atmosphere and beyond Finally it explores the role that advanced technology might play in special environments of the future such as long journeys into space
