Human Physiology R.F. Schmidt,G. Thews,2013-11-11 Human Physiology is the English version of a time honored German textbook first published by HERMANN REIN in 1936 We undertook the preparation of a completely revised 20th edition with the intention of making the book accessible to a wide range of English speaking readers The subject matter was therefore organized so as to corre spond to the structuring of physiology courses in most countries of the world The book is directed primarily at students of medicine Its aim is to enable

them to understand living processes in the human organism providing the basis for the scientific understanding of pathological changes. The material was chosen to give the reader not only the knowledge required for passing examinations but also information necessary for a subsequent professional career. For this reason special attention was devoted to pathophysiological aspects. We hope that the book will prove a useful reference on the present status of physiology for physicians in private and hospital practice as well as for its primary readership. The book should also serve biologists, biochemists, pharmacologists, pharmacists, and psychologists as a source of information on the physiological principles underlying their disciplines.

Post-Anthropocene Greenhouse Earth Andrew Yoram Glikson,2017-07-10 This book presents projections and blueprints of the future geologic period climate and biosphere based on our current understanding of the Earth s history and recent developments in the atmosphere ocean cryosphere system By the second decade of the 21st century it has become clear that rather than channel its efforts into protecting its planetary biosphere and living species Homo sapiens continues to sink its remaining resources into weapons including nuclear missiles thus increasing the risk of intentional or accidental spread of radioactive nuclides on land oceans and atmosphere With time possibility becomes probability and probability becomes certainty heralding a transition from the Anthropocene to a new geological period named here as Plutocene after the element

Plutonium During the Plutocene the biosphere is dominated by elevated temperatures analogous to the Pliocene 2.6–5.3 Ma ago or the Miocene 5.3–23 Ma ago when mean global temperatures were 2 to 4 degrees Celsius warmer and sea levels 20 to 40 meters higher than pre industrial levels High levels of radioactivity will persist for at least 20 000 years and acid oceans will severely limit biological activity to the hardiest species Atmospheric CO₂ higher than 500 ppm with residence time on the order of thousands of years will delay the subsequent glacial cycle These factors restrict comparisons of the Plutocene with biosphere conditions during the Miocene and Pliocene periods partly because the flora and fauna evolved more gradually during these periods unlike the abrupt climate shift of state during the second half of the 20th century and first part of the 21st century Following a long lull in biological activity dominated by radiation resistant organisms especially Arthropods a resumption of glacial cycles and decline in radioactivity will lead to the re emergence of descendants of burrowing mammals and other genera Depending on the intensity of radioactive pollution hunter gatherer humans may survive in northern latitudes relatively cold high altitude mountain valleys and elevated volcanic islands In some areas subsistence farming may be possible A new cycle will commence
