Constructing Music Teresa M. Nakra, 2024 Why does music exert such a strong pull on us How does it work Traditional courses in music fundamentals give students a basic understanding of the building blocks of music and how to put them together to make a result that produces an intended effect Constructing Music Musical Explorations in Creative Coding takes students a step further through a series of step by step tutorials and lessons author Teresa M Nakra presents a new method for teaching music fundamentals that foregrounds creative coding practices and builds upon the computing skills that today's students already possess By encouraging experimentation with computer code this book gives students tools to actively investigate

simulate and engage with the structure of music ultimately leading to greater understanding about the processes that underlie music's power over us. Designed to support computer-based learning in tonal harmony, musicianship, and music theory, *Constructing Music* avoids the lens of Western music notation and instead explains music content through analogies with toy bricks and references ideas from creative technology, engineering, and design. Students also engage directly with the components of musical structure using editable short code patches developed in Max, a visual coding environment for interactive music audio and media. Dozens of patches accompany the book and allow readers to play with the building blocks of sound, reinforcing each topic by tinkering, modifying, and creating their own versions of the material. Each chapter explains core music theory concepts in detail and supports every description through code simulations progressing through the topics with increasing complexity. In the final chapter, Nakra explores the questions and theories that emerge from the lessons considering the role of music as a proto form of AI and its impacts on emotion, wellness, and creativity.

Getting Started with Adafruit Trinket Mike Barela, 2014-09-26. Arduino's ubiquity and simplicity has led to a gigantic surge in the use of microcontrollers to build programmable electronics projects. Despite the low cost of Arduino, you're still committing about 30% worth of hardware every time you build a project that has an Arduino inside. This is where Adafruit's Trinket comes in: Arduino-compatible, one-third the price, and low power, the Trinket lets you make inexpensive and powerful programmable electronic projects. Written by one of the authors of Adafruit's Trinket documentation, *Getting Started with Trinket* gets you up and running quickly with this board and gives you some great projects to inspire your own creations.

Collaborative and Distributed Processes in Contemporary Music-Making Richard Glover, Lauren Redhead, 2020-04-09. This volume represents the second proceedings of the Royal Musical Association's RMA Music and as Process Study Group. It is not surprising that a large number of the contributors to the Music and as Process Study Group are active practitioners in the performance and composition of contemporary music. The collaborations documented here represent the bringing together of disciplines, joint work between practitioners who contribute their own specific areas of expertise to a composite creative activity, and work that crosses disciplines in order to make a critical comment in each of them. In this collection, these three types of collaborative work describe an increasing amount of contemporary music practice. In addition to the increasing involvement of practice in research, the understanding and prevalence of practice methodologies in the form of practice research has also increased in musicology. This volume reflects these concerns through contributions from authors who are all active practitioners in their respective fields of music performance, composition, improvisation, and conducting. The diversity of these contributions shows the variety of processes and practices that are currently being undertaken by proponents of the field of contemporary music. These essays provide a snapshot of the current collaborative and distributed processes that are employed by today's contemporary music practitioners. The chapters contained in this volume reveal the varied nature of the approaches to creativity in music making and the ways that these are distributed across its practitioners during each stage of
