KEYSTONE BIOLOGY STUDY GUIDE

Keystone Biology Review - Module 1 – CELLS AND CELL PROCESSES

All living things have the following characteristics:

- They are all made of cells: either one cell (**unicellular**) or many cells (**multicellular**).
- They reproduce **sexually** (using 2 parents) or **asexually** (1 parent).
- They perform **respiration** to make energy available to the cell.
- They carry on **metabolic** activities (chemical reactions).
 - This includes: **Synthesizing** larger compounds
 - Digesting** larger compounds to smaller
- They grow and develop
- They respond to environmental stimuli and maintain homeostasis (constant internal condition despite external conditions)

There are 2 Major Cell Types: **Prokaryotes** and **Eukaryotes**.

Differences are shown below:

Prokaryotes	Eukaryotes
Simpler; Unicellular Smaller No true nucleus because there is no membrane around their DNA No complex organelles Includes Bacteria	More complex; Multicellular; Cell specialization Larger A membrane around their DNA (A Nucleus!) Complex organelles (Mitochondria, Endoplasmic reticulum, Golgi, Chloroplasts Includes Animals, Plants, Fungi

Similarities between Prokaryotes and Eukaryotes

Both have:

- Cell membrane/plasma membrane – semi-permeable and regulates what enters and exits the cell
- Ribosomes** – make proteins for the cell
- Cytoplasm** – site of various chemical reactions

What are some complex organelles in Eukaryotic cells?

- **Mitochondria** – makes energy (ATP) for the cell using the process of cellular respiration
- **Chloroplasts** – make sugar and oxygen using the process of photosynthesis.
- **Rough Endoplasmic reticulum** – transports proteins
- **Smooth Endoplasmic reticulum** – makes lipids
- **Golgi Complex** – modifies and packages proteins
- **Nucleus** – control center of the cell, houses the cell's DNA
- **Lysosomes** – "suicide sac of the cell" contains strong digestive enzymes

Living things are organized in the following way:

All cells and organs have a specific shape because they do a specific function.

Example: Alveoli are structures in the lungs. They are little sacs with lots of little spaces.

Dealing with the Complexity of Future Smart Cyber-Physical Systems Martin Törnngren, Didem Gürdür Broo, Elena Fersman, Harold (Bud) Lawson, Vincent Aravantinos, 2021-02-16 A key aspect of cyber physical systems CPS is their potential for integrating information technologies with embedded control systems and physical systems to form new or improved functionalities CPS thus draws upon advances in many areas This positioning provides unprecedented opportunities for

innovation both within and across existing domains However at the same time it is commonly understood that we are already stretching the limits of existing methodologies In embarking towards CPS with such unprecedented capabilities it becomes essential to improve our understanding of CPS complexity and how we can deal with it Complexity has many facets including complexity of the CPS itself of the environments in which the CPS acts and in terms of the organizations and supporting tools that develop operate and maintain CPS This book is a result of a journal Special Issue with the objective of providing a forum for researchers and practitioners to exchange their latest achievements and to identify critical issues challenges opportunities and future directions for how to deal with the complexity of future CPS The contributions include 10 papers on the following topics I Systems and Societal Aspects Related to CPS and Their Complexity II Model Based Development Methods for CPS III CPS Resource Management and Evolving Computing Platforms and IV Architectures for CPS The Art of Stereography Douglas Heil,2017-02-02 Three dimensional stereoviews were wildly popular in the mid 19th century Yet public infatuation fueled highbrow scorn and even when they fell from favor critics retained their disdain Thus a dazzling body of photographic work has unjustly been buried This book explores how compelling images were made by carefully combining subject matter composition lighting tonality blocking and depth It draws upon the fine arts the mass media humanities history and even geology Throughout overlooked photographers are celebrated such as the one who found extraordinary visual parallels within nature anticipating Cezanne and Seurat or the one who refused to play favorites during a bitter war and found humanity on both sides or the one who took a favorite American glen and found menace all about Stereographers were actually more like film directors or television producers than large format photographers the best ones fused artistry with commercial appeal **Progress in Modern Hydrology** John C. Worboys,Michael Lockwood,Ashish Kothari,Sue Feary,Ian Pulsford,2015-04-08 Protected Area

Governance and Management presents a compendium of original text case studies and examples from across the world by drawing on the literature and on the knowledge and experience of those involved in protected areas. The book synthesises current knowledge and cutting edge thinking from the diverse branches of practice and learning relevant to protected area governance and management. It is intended as an investment in the skills and competencies of people and consequently the effective governance and management of protected areas for which they are responsible now and into the future. The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term and organisations such as International Union for the Conservation of Nature are a unifying force in this regard. Nonetheless protected areas are a socio political phenomenon and the ways that nations understand govern and manage them is always open to contest and debate. The book aims to enlighten educate and above all to challenge readers to think deeply about protected areas their future and their past as well as their present. The book has been compiled by 169 authors and deals with all aspects of protected area governance and management. It provides information to support capacity development training of protected area field officers managers in charge and executive level managers.

Instructional Communication Competence and Instructor Social Presence: Enhancing Teaching and Learning in the Online Environment Sherwyn

Morreale, Patrick R. Lowenthal, Janice Thorpe, Larisa Olesova, 2024-05-16. The coronavirus pandemic mandated unexpected instant transitions to remote learning and accelerated student demand for online courses. As a result colleges and universities in the U S and around the world began and have continued to expand their online courses and degree programs. The online learning industry is projected to pass 370 billion by 2026 and one third of post secondary school administrators indicate they will continue to offer both remote and online course options even after their campuses completely resume offering in person face to face courses. Students have demonstrated there is an increased demand for online courses as well. A national survey of 1 413 students registered at U S higher education institutions in fall 2020 and spring 2021 said their experiences with learning remotely during the pandemic left them with a positive attitude toward online and hybrid courses. This increased interest calls attention to the need for more scholarly examination of online teaching and learning.

Microbial Diversity and Ecosystem Functioning in Fragmented Rivers Worldwide Lunhui Lu, Dayong Zhao, Leonardo D. Fernández, Zhe

Li, 2023-11-27. Dams or barriers are among the most significant anthropogenic threats to global freshwater ecosystems although they provide invaluable services for shipping hydropower generation flood protection and storage of drinking and irrigation water. River fragmentations due to dams and barriers lead the aquatic landscape into isolated river sections resulting in hydromorphological discontinuities along longitudinal or lateral gradients. Fragmented river habitats are unstable. They experience uncertain disturbances in both time and space with random and complex hydrological and environmental processes such as water flow particulate matter sedimentation reservoir regulation and terrestrial input. The diversity composition functionality and activity of microbial communities are important indicators of river ecosystem.

functions and services Yet river fragmentations are likely to disrupt and reconstruct microbial communities redirecting the patterns of biogeochemical cycles of biogenic elements Methodology such as mathematical models is still limited to describing and elucidating microbial processes under changing hydrological environments in the fragmented rivers Thus how do the riverine microbial communities and ecosystem functions respond to the fragmentation in rivers This Research Topic represents a collective focus on microbial ecology functional diversity and new microbial modeling in fragmented rivers We wish to present new findings in community assembly mechanisms biotic interactions functional diversity and ecosystem functioning responses to the river fragmentations New perspectives will also provide us with deep insights into the ecological effects of river fragmentation This Research Topic aims to present the original research articles and reviews to provide new findings on microbial diversity and ecosystem functioning in fragmented rivers worldwide We welcome original research reviews mini reviews opinions methods hypotheses and theories and perspectives The directions include but are not limited to the following aspects The continuum of the microbial community in responses to dams or barriers Novel microbial community assembly mechanisms functional traits and biotic interactions in fragmented rivers at local regional and global scales Functional genes functional groups and functional diversity in driving biogenic element cycles Mathematical modeling in aquatic microbial ecology

Bird Minds Gisela Kaplan, 2015-08-03 In her comprehensive and carefully crafted book Gisela Kaplan demonstrates how intelligent and emotional Australian birds can be She describes complex behaviours such as grieving deception problem solving and the use of tools Many Australian birds cooperate and defend each other and exceptional ones go fishing by throwing breadcrumbs in

the water extract poisonous parts from prey and use tools to crack open eggshells and mussels The author brings together evidence of many such cognitive abilities suggesting plausible reasons for their appearance in Australian birds Bird Minds is the first attempt to shine a critical and scientific light on the cognitive behaviour of Australian land birds In this fascinating volume the author also presents recent changes in our understanding of the avian brain and links these to life histories and longevity Following on from Gisela s well received books on the Australian Magpie and the Tawny Frogmouth as well as two earlier titles on birds Bird Minds contends that the unique and often difficult conditions of Australia s environment have been crucial for the evolution of unusual complexities in avian cognition and behaviour Ecology of Coastal Marine Sediments
