Biology Staar Category 2 Mechanisms Of Genetics

Nikolai Petrovich Dubinin

Biology Staar Category 2 Mechanisms Of Genetics:

The Genetic Mechanism and the Origin of Life Lawrence Dillon, 2012-12-06 As shown in the text there can be little doubt that the genetic mechanism is for all practical purposes equivalent to life itself Consequently it is unrealistic to seek knowledge of the origin of life and its subsequent evolution without simultaneously searching for an understanding of how this apparatus arose and evolved Fortunately the annual publication over the recent years of thousands of papers dealing with the genetic processes has brought the state of knowledge to a level where a synthesis of their major details in relation to life's history is feasible Because of the voluminous body of literature no single book can possibly treat all the ramifications of this fundamental subject subdivision into multiple volumes is necessary This volume the first of a trilogy explores the molecular aspects of the problem in connection with the precellular aspects up to the point of the origin of the cell The second currently in progress is concerned with the subsequent evolution of the cell as revealed by the energy related organelles and their genetic apparatuses and by ultrastructural details of other cellular parts The third volume as presently planned deals with developmental immunological and other complexities at the organismic level and in so doing throws additional light on basic properties of the genetic processes themselves Thus the genetic apparatus provides the warp and evolution the woof of the intricate fabric that emerges
