

STRUCTURE OF THE HUMAN EYE

Name _____

Label the parts of the human eye on the diagram below.

- a. aqueous humor
- b. cornea
- c. pupil
- d. lens
- e. iris
- f. ciliary body
- g. vitreous humor
- h. retina
- i. optic nerve
- j. choroid coat
- k. sclera
- l. suspensory ligament

Fill in the blanks with the correct answers.

Light passes through a transparent layer, the Cornea, which begins to focus the light onto the rear of the eye. Light then passes through the lens, the major focusing structure. The lens is held in place by suspending ligaments to

Ciliary muscles. Contraction of these muscles changes the shape of the lens and thus the focal point. The iris, located between the cornea and the lens, controls the amount of light entering the eye. The iris reduces the size of the transparent zone, or pupil of the eye. The retina, in the back of the eye, contains about 3 million cones which detect color and one billion rods which detect light and dark. The central region of the retina where images are focused is called the fovea. The

optic nerve transmits visual impulses directly to the brain. People whose point of focus lies in front of the fovea are said to be Near sighted. If the point of focus lies behind the fovea, they are called far sighted. Corrective lenses may be used to focus the image onto the fovea, thus correcting the condition.

Biology If8765 Human Eye Answers

James Wardrop

Biology If8765 Human Eye Answers:

Vision Facts Jason Yang ,Charles Pidgeon,2018-07-16 Vision Facts is a question and answer guide to the wonders of the human eye its complex structures and the process of visual perception It traces the journey of vision from a ray of light entering the eye to the processing done by the brain to the development and aging of the human visual system and common disorders associated with both processes Organized in an intuitive question and answer format and accompanied by clear diagrams Vision Facts provides answers regarding your vision in a manner accessible to all who are interested Each topic includes references to external resources such as lecture notes and research papers for those who wish to delve deeper It is a perfect handbook for anyone who is interested in visual science sensory processing neuroscience or physiology and is an excellent reference for anyone considering a career in ophthalmology or optometry Some examples of the questions include the following What is the resolution of the eye Why do astronomers often cover flashlights with a red filter while stargazing What is color blindness and how does it occur What role does vision play in the circadian rhythm What chemical signals cause the eye to develop into its mature form How does alcohol during pregnancy affect eye development How well can a newborn baby see How does being born prematurely affect vision What is 20/20 vision How does aging affect vision These are all questions that are addressed in Vision Facts along with countless more
