

Worksheet 6

TOPIC: READING PHYLOGENETICS TREES

1. Consider the phylogenetic tree shown below. **Nodes** are labeled with numbers (1 – 13) above each node. You can refer to monophyletic groups (clades) by their ancestral nodes in your answers.

- a) Is the group composed only of Fungi and *Forams* monophyletic? Justify your answer.

No. A monophyletic group is defined as a group of the groups/species, their most recent common ancestors, and the descendants of this ancestors. A monophyletic group would be Fungi, Forams, their recent ancestor (8), and Nucleariids (the ancestor's descendant).

- b) Identify a monophyletic group of your choice that includes choanoflagellates. List all of the members of this group and the node of the common ancestor.

The node of the common ancestor of choanoflagellates would be 11 and would include the descendant vertebrates, insects, sponges, and choanoflagellates in the monophyletic group.

- c) Which node represents the most recent common ancestor of land plants and animals?

Node 2.

- d) Assume that multicellularity can be gained but not lost.

Agents and Goals in Evolution Samir Okasha, 2018-06-12 Samir Okasha approaches evolutionary biology from a philosophical perspective in *Agents and Goals in Evolution* analysing a mode of thinking in biology called agential thinking He considers how the paradigm case involves treating an evolved organism as if it were an agent pursuing a goal such as survival or reproduction and seeing its phenotypic traits as strategies for achieving that goal or furthering its biological interests As agential thinking deliberately transposes a set of concepts goals interests strategies from rational human agents and to the biological world more generally Okasha's enquiry firstly looks at the justification for this is it mere anthropomorphism or does it play a genuine intellectual role in the science From this central question key points are considered such as how do we identify the goal that evolved organisms will behave as if they are trying to achieve Can agential thinking ever be applied to groups rather than to individual organisms And how does agential thinking relate to the controversies over fitness maximization in evolutionary biology In addition Okasha examines the relation between the adaptive and the rational by considering whether organisms can validly be treated as agent like Should we expect their evolved behaviour to correspond with that of rational agents as codified in the theory of rational choice If so does this mean that the fitness maximizing paradigm of the evolutionary biologist can be mapped directly to the utility maximizing paradigm of the rational choice theorist All of these important questions are engagingly raised and discussed at length
