for which I established the first large methadone maintenance treatment program in California. My basic and clinical research experience convinced me that an institution encompassing laboratory research studies on normal human volunteers and treatment research under a single roof could expedite progress in understanding the drug addictions. That concept was transformed into reality by the founding in 1974 of the Addiction Research Foundation of Palo Alto, California. The funds for construction of a laboratory were provided by a generous grant from the Drug Abuse Council, a consortium of several foundations, the president of which was Thomas L. Bryant.

How to Think about Data Science Diego Miranda-Saavedra,2022-12-23 This book is a timely and critical introduction for those interested in what data science is and isn't and how it should be applied The language is conversational and the content is accessible for readers without a quantitative or computational background but at the same time it is also a practical overview of the field for the more technical readers The overarching goal is to demystify the field and teach the reader how to develop an analytical mindset instead of following recipes The book takes the scientist's approach of focusing on asking the right question at every step as this is the single most important factor contributing to the success of a data science project Upon finishing this book the reader should be asking more questions than I have answered This book is therefore a practising scientist's approach to explaining data science through questions and examples
