INTRODUCTION TO BIOMEDICAL INSTRUMENTATION MANDEEP SINGH, 2014-08-01 Primarily intended as a textbook for the undergraduate students of Instrumentation Electronics and Electrical Engineering for a course in biomedical instrumentation as part of their programmes. The book presents a detailed introduction to the fundamental principles and applications of biomedical instrumentation. The book familiarizes the students of engineering with the basics of medical science by explaining the relevant medical terminology in simple language. Without presuming prior knowledge of human physiology it helps the students to develop a substantial understanding of the complex processes of functioning of the human body. The mechanisms of all major biomedical instrumentation systems ECG EEG CT scanner MRI machine pacemaker dialysis machine ultrasound imaging machine laser lithotripsy machine defibrillator and plethysmograph are explained comprehensively. A large number of illustrations are provided throughout the book to aid in the development of practical understanding of the subject matter. Chapter end review questions help in testing the students grasp of the underlying concepts. The second edition of the book incorporates detailed explanations to action potential supported with illustrative example and improved figure ionic action of silver silver chloride electrode and isolation amplifiers. It also includes mathematical treatment to ultrasonic transit time flowmeters. A method to find approximate axis of heart and image reconstruction in CT scan is explained with simple examples. A topic on MRI has been simplified for clear understanding and a new section on Positron Emission Tomography PET which is an emerging tool for cancer detection has been introduced.
