Building Knowledge in Architecture Richard Foqué, 2010 Foqu establishes a general design theory based on the axioms of pragmatic thinking a crucial unity between experience and the process of learning and between conceptual thought and situational consciousness Building Knowledge develops a theoretical framework and practical instrumentation to establish a knowledge base for the discipline of architecture Part one of the book presents design methods as a third way of investigating reality apart from scientific methods or the conception of art By describing the science philosophical context Foqu extensively analyses the nature of design activity and the design process its inherent characteristics and the differences between science and art As such it is argued that design processes have a research dimension in which which are essentially contextual and action driven Foqu offers an integrated and comprehensive perspective to understand design activity both from an epistemological and practical standpoint This results in an expanded discourse about the true nature of architectural

design processes Within this theoretical framework part two explains how case study research is a primordial means to establish a knowledge base for the discipline and profession of architecture From this premise Foqu compares case study research in law medicine and business administration and develops a practical and comprehensive approach to case studies in architecture The methodology offers a solid and general framework wherein a consistent body of knowledge regarding architectural design processes can be generated This promotes deeper insight in the complex relationship between context product and process which governs every design process on the one hand and between the several stakeholders involved on the other hand Publisher
