Stability and Ductility of Steel Structures (SDSS'99) D. Dubin&acaron;, M. Iványi, 1999-08-03 With the gradual development of rules for designing against instability the idea emerged in London in 1974 to hold an International Colloquium treating every aspect of structural instability of steel structures There have been 17 International Colloquia Stability Sessions around the world starting with the first one in Paris in 1972 until with the last one in Nagoya in 1997 In Nagoya it was decided to continue the series of travelling colloquia by launching the Sixth Colloquium in September 1999 with the First Session to be held at the Politehnica University of Timi oara Rom nia which will be followed by another in the year 2000 at the Gediminas Technical University in Vilnius Lithuania a third one during SSRSC s Year 2000 Annual Meeting in the US and a fourth one in Australia or New Zealand At present important research projects are in progress around the world like SAC Joint Venture Project in USA INCO COPERNICUS RECOS in Europe and others which are devoted to improve and develop new methods for the safety design of steel structures in seismic zones Special attention is paid in Europe USA and Japan to improve the design codes and detailing of seismic resistant steel structures This was the reason to organise the Session of Nagoya as Stability and Ductility of Steel Structures Colloquium Romania is also a strong seismic territory and therefore the topic of the Timi oara Session covered both stability and ductility problems The technical programme of the SDSS 99 Colloquium in Timi oara has been split into nine working sessions

Kaynia,2014-01-20 Fragility functions constitute an emerging tool for the probabilistic seismic risk assessment of buildings infrastructures and lifeline systems The work presented in this book is a partial product of a European Union funded research project SYNER G FP7 Theme 6 Environment where existing knowledge has been reviewed in order to extract the most appropriate fragility functions for the vulnerability analysis and loss estimation of the majority of structures and civil works exposed to earthquake hazard Results of other relevant European projects and international initiatives are also incorporated in the book In several cases new fragility and vulnerability functions have been developed in order to better represent the specific characteristics of European elements at risk Several European and non European institutes and

Universities collaborated efficiently to capitalize upon existing knowledge State of the art methods are described existing fragility curves are reviewed and where necessary new ones are proposed for buildings lifelines transportation infrastructures as well as for utilities and critical facilities Taxonomy and typology definitions are synthesized and the treatment of related uncertainties is discussed A fragility function manager tool and fragility functions in electronic form are provided on extras springer com Audience The book aims to be a standard reference on the fragility functions to be used for the seismic vulnerability and probabilistic risk assessment of the most important elements at risk It is of particular interest to earthquake engineers scientists and researchers working in the field of earthquake risk assessment as well as the insurance industry civil protection and emergency management agencies
