Comprehensive Healthcare Simulation: Anesthesiology Bryan Mahoney, Rebecca D. Minehart, May C. M. Pian-Smith, 2019-12-17. This book functions as a practical guide for the use of simulation in anesthesiology. Divided into five parts, it begins with the history of simulation in anesthesiology, its relevant pedagogical principles, and the modes of its employment. Readers are then provided with a comprehensive review of simulation technologies as employed in anesthesiology and are guided on the use of simulation for a variety of learners: undergraduate and graduate medical trainees, practicing anesthesiologists, and allied health providers. Subsequent chapters provide a how-to guide for the employment of simulation across a wide range of anesthesiology subspecialties, before concluding with a proposed roadmap for the future of translational simulation in healthcare.

The Comprehensive Textbook of Healthcare Simulation: Anesthesiology is written and edited by leaders in the field and includes hundreds of high-quality color surgical illustrations and photographs.

Human Performance on the Flight Deck Don Harris, 2016-12-05. Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner, this book describes the interrelationships between the various application areas of human factors, recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes. The relationship between areas such as pilot selection, training, flight deck design, and safety management is continually emphasised within the book. It also affirms the upside of human factors in aviation: the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails. The book is divided into four main parts. Part one describes the underpinning science base with chapters on human information processing, workload, situation awareness, decision making, error, and individual differences. Part two of the book looks at the human in the system, containing chapters on pilot selection, simulation, and training, stress, fatigue, and alcohol, and environmental stressors. Part three takes a closer look at the machine: the aircraft, beginning with an examination of flight deck display design, followed by chapters on aircraft control, flight deck automation, and HCI on the flight deck. Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline. The final chapter in this section looks at human factors for incident and accident investigation. The book is written for professionals within the aviation industry, both on the flight deck and elsewhere, for postgraduate students, and for researchers working in the area.
