## Challenger Solid State Series

### MODEL C10

10-WATT TRANSISTOR  
PUBLIC ADDRESS AMPLIFIER

## OPERATING AND INSTALLATION MANUAL

### DESCRIPTION

Bogen Model C10 is a fully transistorized public address amplifier rated at 10 watts. The unit will accommodate one high impedance microphone and one auxiliary program source such as a tuner, tape recorder, or phonograph with ceramic cartridge. Individual controls are provided for the microphone and auxiliary inputs along with a treble control for adjustment of tonal balance.

Balanced or unbalanced outputs are provided for 4, 8, and 16-ohm speakers, and 25-volt (62.1 ohms) or 70-volt (490 ohms) constant-voltage systems. A terminal strip with screw terminals allows convenient connection of speakers, except 70-volt. For 70-volt operation, a quick-disconnect speaker socket is provided.

The C10 operates from a 120-volt, 60Hz source and has a maximum power consumption of 46 watts. A thermostat enclosed in the power transformer protects the amplifier against overloads.

### INSTALLATION

#### UNPACKING

The amplifier was carefully checked before leaving the factory. Inspect shipping container and unit carefully for indication of improper handling; if the unit has been damaged, make an immediate claim to distributor from whom it was purchased, or if the amplifier was shipped directly to you, notify transportation company without delay and place your claim.

#### POWER AND GROUNDING

The amplifier is furnished with an ac line cord terminated in a three-prong plug. The line cord should be plugged into a three-wire grounded outlet providing a nominal 120-volt, 60 Hz power source. This will ground the amplifier as well as supply power to it.

It is important to ground the amplifier. Therefore, if a three-wire outlet is not available, an adapter such as Leviton No. 5017 should be used to convert a standard two-wire outlet for use with three-wire plugs. The adapter is provided with a grounding detail which should be connected to the screw holding the wall plate to the receptacle.

In some areas, the wall plate screw is not grounded. In this case it will be necessary to connect a grounding wire from the GND terminal on the rear chassis of the amplifier to a water or steam pipe.
