Bonded Joints And Repairs To Composite Airframe Structures:

Bonded Joints and Repairs to Composite Airframe Structures Chun Hui Wang, Cong N. Duong, 2015-10-10 Bonded Joints and Repairs to Composite Airframe Structures is a single source reference on the state of the art in this rapidly growing area. It provides a thorough analysis of both internal and external joints and repairs as well as discussions on damage tolerance, non-destructive inspection, self-healing repairs, and other essential information not only on the joints and repairs themselves but critically on how they differ from bonds and repairs to metallic aircraft. Authors Wang and Duong bring a valuable combination of academic research and industry expertise to the book, drawing on their cutting-edge composite technology experience, including analytic and computational leadership of damage and repair planning for the Boeing 787. Intended for graduate students, engineers, and scientists working on the subject in aerospace industry, government agencies, research labs, and academia, the book is an important addition to the limited literature in the field. Offers rare coverage of composite joints and repairs to composite structures, focusing on the state of the art in analysis. Combines the academic, government, and industry expertise of the authors, providing research findings in the context of current and future applications. Covers internal and external joints and repairs as well as damage tolerance, non-destructive inspection, and self-healing repairs. Ideal for graduate students, engineers, and scientists working in the aerospace industry, government agencies, research labs, and academia.

Bonded Repair of Aircraft Structures A. Baker, Jones, 1988-05-31 The conventional approach to through-life support for aircraft structures can be divided into the following phases: i) detection of defects, ii) diagnosis of their nature and significance, iii) forecasting future behaviour, prognosis, and iv) prescription and implementation of remedial measures, including repairs. Considerable scientific effort has been devoted to developing the science and technology base for the first three phases. Of particular note is the development of fracture mechanics as a major analytical tool for metals for predicting residual strength in the presence of cracks, damage tolerance, and rate of crack propagation under service loading. Intensive effort is currently being devoted to developing similar approaches for fibre composite structures, particularly to assess damage tolerance and durability in the presence of delamination damage. Until recently, there has been no major attempt to develop a science and technology base for the last phase, particularly with respect to the development of repairs. Approaches are required which will allow assessment of the type and magnitude of defects amenable to repair and the influence of the repair on the stress intensity factor or some related parameter. Approaches are also required for the development and design of optimum repairs and for assessment of their durability.

Advances in the Bonded Composite Repair of Metallic Aircraft Structure A.A. Baker, L.R.F. Rose, Rhys Jones, 2003-01-23 The availability of efficient and cost-effective technologies to repair or extend the life of aging military airframes is becoming a critical requirement in most countries around the world, as new aircraft become prohibitively expensive and defence budgets shrink. To a lesser extent, a similar situation is arising with civil aircraft, with falling revenues and the high cost of

replacement aircraft This book looks at repair reinforcement technology which is based on the use of adhesively bonded fibre composite patches or doublers and can provide cost effective life extension in many situations From the scientific and engineering viewpoint whilst simple in concept this technology can be quite challenging particularly when used to repair primary structure This is due to it being based on interrelated inputs from the fields of aircraft design solid mechanics fibre composites structural adhesive bonding fracture mechanics and metal fatigue The technologies of non destructive inspection NDI and more recently smart materials are also included Operational issues are equally critical including airworthiness certification application technology including health and safety issues and training Including contributions from leading experts in Canada UK USA and Australia this book discusses most of these issues and the latest developments Most importantly it contains real histories of application of this technology to both military and civil aircraft

Recent Advances in Structural Joints and Repairs for Composite Materials Liyong Tong,C. Soutis,2013-03-09 Joints in components or structures incur a weight penalty are a source of failure cause manufacturing problems and are unfortunately unavoidable in most structures ranging from aircraft and spacecraft to ships and offshore platforms to automobiles bridges and buildings An important requirement for the complete design of practical structures is the development of attachment methods and joint designs *Recent Advances in Structural Joints and Repairs for Composite Materials* provides an up to date account of adhesively bonded and mechanically fastened joints and repairs Audience This book will prove to be an informative resource for all engineers and researchers involved with joining and repair of composite structures
