Current Challenges and Future Perspectives on Emerging Bioelectrochemical Technologies Tian Zhang, Pier-Luc Tremblay, 2016-08-05 The increasing demand for energy worldwide currently evaluated at 13 terawatts per year has triggered a surge in research on alternative energy sources more sustainable and environmentally friendly Bio catalyzed electrochemical systems BESs are a rapidly growing biotechnology for sustainable production of bioenergy and or value added bioproducts using microorganisms as catalysts for bioelectrochemical reactions at the electrode surface In the last decades this biotechnology has been intensively studied and developed as a flexible and practical platform for multiple applications such as electricity production wastewater treatment pollutants remediation desalination and production of biogas biofuels or other commodities BESs could have a critical impact on societies in many spheres of activity and become one of the solutions to reform our petroleum based economy However BESs research has so far been limited to lab scale with the notable exceptions of pilot scale microbial fuel cells for brewery and winery wastewater treatment coupled with electricity generation In general more knowledge has to be acquired to overcome the issues that are stymieing BESs development and commercialization For example it is critical to understand better microbial physiology including the mechanisms responsible for the transfer of electrons between the microbes and the electrodes to start optimizing the systems in a more rational manner There are many BES processes and for each one of them there is a multitude of biological and electrochemical specifications to investigate and adjust such as the nature of the microbial platform electrode materials the reactor design the substrate the medium composition and the operating conditions The ultimate goal is to develop highly energy efficient BESs with a positive footprint on the environment while maintaining low cost and generating opportunities to create value BESs are complex systems developed with elements found in multiple fields of science such as microbiology molecular biology bioinformatics biochemistry electrochemistry material science and environmental engineering Given the high volume of research activities going on in the field of BESs today this e book explores the current challenges the more recent progresses and the future perspectives of BESs technologies The BESs discussed here include microbial fuel cells microbial electrolysis cells microbial electrosynthesis cells microbial electroremediation cells etc

Management of Animal Care and Use Programs in Research, Education, and Testing Robert H. Weichbrod, Gail A. (Heidbrink) Thompson, John N.

Norton, 2017-09-07 AAP Prose Award Finalist 2018 19 Management of Animal Care and Use Programs in Research Education and Testing Second Edition is the extensively expanded revision of the popular Management of Laboratory Animal Care and Use Programs book published earlier this century. Following in the footsteps of the first edition, this revision serves as a first line management resource providing for strong advocacy for advancing quality animal welfare and science worldwide and continues as a valuable seminal reference for those engaged in all types of programs involving animal care and use. The new edition has more than doubled the number of chapters in the original volume to present a more comprehensive overview of the current breadth and depth of the field with applicability to an international audience. Readers are provided with the latest information and resource and reference material from authors who are noted experts in their field. The book emphasizes the importance of developing a collaborative culture of care within an animal care and use program and provides information about how behavioral management through animal training can play an integral role in a veterinary health program. Provides a new section on Environment and Housing containing chapters that focus on management considerations of housing and enrichment delineated by species. Expands coverage of regulatory oversight and compliance assessment and assurance issues and processes including a greater discussion of globalization and harmonizing cultural and regulatory issues. Includes more in depth treatment throughout the book of critical topics in program management: physical plant, animal health and husbandry. Biomedical research using animals requires administrators and managers who are knowledgeable and highly skilled. They must adapt to the complexity of rapidly changing technologies, balance research goals with a thorough understanding of regulatory requirements and guidelines and know how to work with a multi generational multi cultural workforce. This book is the ideal resource for these professionals. It also serves as an indispensable resource text for certification exams and credentialing boards for a multitude of professional societies. Co publishers on the second edition are ACLAM American College of Laboratory Animal Medicine, ECLAM European College of Laboratory Animal Medicine, IACLAM International Colleges of Laboratory Animal Medicine, JCLAM Japanese College of Laboratory Animal Medicine, KCLAM Korean College of Laboratory Animal Medicine, CALAS Canadian Association of Laboratory Animal Medicine, LAMA Laboratory Animal Management Association and IAT Institute of Animal Technology. Polymers for Agri-Food Applications

Tomy J. Gutiérrez, 2019-08-02 This book presents an exhaustive analysis of the trends in the development and use of natural and synthetic polymer systems aimed at sustainable agricultural production. The polymers have allowed the development of controlled and released systems of agrochemicals such as pesticides, fertilizers and phytohormones through micro and nanoencapsulated systems which protect and stimulate the growth of crops at low costs and without damage to the environment. Hydrogel systems from natural and synthetic polymers have also had their place in the agricultural industry since they allow to maintain the humidity conditions of the crops for their correct development in drought times. Mulch films made of polymers have also become important in the control of weeds and pests in crops as well as the use of edible coatings.

applied to fruits and vegetables during post harvest which reduce the losses of these perishable foods Currently the systems indicated as well as others are already used on a large scale However research studies in this area have been limited compared to other polymer applications This book collects useful information for researchers students and technologies related to the polymer technology and agri food production In this book world renowned researchers have participated including associate editors of important journals as well as researchers working in the area of research and development R D of leading agri food industries in the manufacture of agricultural inputs
