Applied Logistic Regression Analysis Quantitative Applications In The Social Sciences:

Applied Logistic Regression Analysis Scott Menard, 1995-06-29 Emphasizing the parallels between linear and logistic regression Scott Menard explores logistic regression analysis and demonstrates its usefulness in analyzing dichotomous polytomous nominal and polytomous ordinal dependent variables The book is aimed at readers with a background in bivariate and multiple linear regression *Applied Logistic Regression Analysis* Scott Menard, 2002 The focus in this Second Edition

is again on logistic regression models for individual level data but aggregate or grouped data are also considered The book includes detailed discussions of goodness of fit indices of predictive efficiency and standardized logistic regression coefficients and examples using SAS and SPSS are included More detailed consideration of grouped as opposed to case wise data throughout the book Updated discussion of the properties and appropriate use of goodness of fit measures R square analogues and indices of predictive efficiency Discussion of the misuse of odds ratios to represent risk ratios and of over dispersion and under dispersion for grouped data Updated coverage of unordered and ordered polytomous logistic regression models

The SAGE Encyclopedia of Social Science Research Methods Michael Lewis-Beck, Alan E Bryman, Tim Futing Liao, 2004 This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels As a teaching resource it will be useful to instructors and students alike and will become a standard reference source Essential for general and academic collections CHOICE Appreciative users of this volume will be students faculty and researchers in academic special and large public libraries for whom it is recommended LIBRARY JOURNALSAGE Reference is proud to announce *The SAGE Encyclopedia of Social Science Research Methods* a three volume resource that is a first of its kind developed by the leading publisher of social science research methods books and journals This unique multi volume reference set offers readers an all encompassing education in the ways of social science researchers Written to be accessible to general readers entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods The Encyclopedia features two major types of entries definitions consisting of a paragraph or two provide a quick explanation of a methodological term and topical treatments or essays discussing the nature history application example and implication of using a certain method Also included are suggested readings and references for

future study To help provide a more complete explanation than is often achieved within the scope of a single article key terms and concepts appear in SMALL CAPITAL LETTERS to refer readers to related terms explained elsewhere In addition to epistemological issues that influence the nature of research questions and assumptions The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology from philosophical issues such as poststructuralism to advanced statistical techniques In covering the full range of qualitative and quantitative data analyses this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation Many entries treat traditional topics in a novel way stimulating both interest and new perspectives One example is the entry Econometrics by Professor Damodar Gujarati Following a process which many educators preach but seldom practice Gujarati walks the reader twice through the research process from economic theory to data and models to analysis once in principle and a second time with an example In using the ordinary process of economic research to achieve an extraordinary impact he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics Topics Covered Analysis of Variance Association and Correlation Basic Qualitative Research Basic Statistics Causal Modeling Structural Equations Discourse Conversation Analysis Econometrics Epistemology Ethnography Evaluation Event History Analysis Experimental Design Factor Analysis Related Techniques Feminist Methodology Generalized Linear Models Historical Comparative Interviewing in Qualitative Research Latent Variable Model Life History Biography Loglinear Models Categorical Dependent Variables Longitudinal Analysis Mathematics and Formal Models Measurement Level Measurement Testing Classification Multiple Regression Multilevel Analysis Qualitative Data Analysis Sampling in Surveys Sampling in Qualitative Research Scaling Significance Testing Simple Regression Survey Design Time Series Key Features Over 900 entries arranged A to Z Each entry is written by a leading authority in the field covering both quantitative and qualitative methods Covers all disciplines within the social sciences Contains both concise definitions and in depth essays Three volumes and more than 1500 pages **Marketing**

Research with SAS Enterprise Guide Kristof Coussement, 2017-03-02 Many marketing researchers companies and business schools need to use statistical procedures and accurately interpret the result that's why the SAS Enterprise Guide software which uses a user friendly drag and drop menu to extract statistical information is so popular Marketing Research with SAS Enterprise Guide includes 236 screen shots to provide a detailed explanation of the SAS Enterprise Guide software Based on a step by step approach and real managerial situations it guides the reader to an understanding of the use of statistical methods It demonstrates ways of extracting information collating it to provide reliable knowledge and how to use these insights to solve day to day business and research problems SAS offers a stand alone marketing research tool by means of the SAS OnDemand Enterprise Guide solution for academics and business professionals This straightforward pragmatic reference manual will help Logistic Regression Fred C. Pampel, 2000-05-26 Trying to determine when to use a logistic

regression and how to interpret the coefficients Frustrated by the technical writing in other books on the topic Pampel's book offers readers the first nuts and bolts approach to doing logistic regression through the use of careful explanations and worked out examples Logistic Regression Models for Ordinal Response Variables Ann A. O'Connell, 2006 Ordinal measures provide a simple and convenient way to distinguish among possible outcomes The book provides practical guidance on using ordinal outcome models *Interaction Effects in Logistic Regression* James Jaccard, 2001-02-21 This work introduces general strategies for testing interactions in logistic regression as well as providing the tools to interpret and understand the meaning of coefficients in equations with product terms Nonrecursive Causal Models William Dale Berry, 1984-07 The author defines the concept of identification and explains what goes wrong with some nonrecursive models to make them nonidentified He provides various tests which can be used to determine whether a nonrecursive model is identified and reviews common techniques for estimating the parameters of an identified model **Research Designs** Paul E. Spector, 1981-09 Author Paul E Spector provides a clear introduction to the principles of experimental and non experimental design including single group design pre test post test designs and factorial designs Spector also covers hierarchical designs multivariate designs the Solomon four group design panel designs and designs with concomitant variables **Central Tendency and Variability** Herbert Weisberg, 1992 Using a clear expository style that builds from simple to more complex topics Weisberg explains how to measure the centre and variation on a single variable Beginning with an exploration of how to measure variables with different numeric or non numeric properties the volume covers such important topics as ways to examine distributions of variables ways to measure the spread of a variable in order to see how much the values on the variable differ how to generalize the sample results to the population and the use of exploratory data analysis to measure centre and spread **Random Factors in ANOVA** Sally Ann Jackson, Dale E. Brashers, 1994 The authors clearly explicate random effects analysis of variance ANOVA through several well chosen real life examples this is a neat little book Dayanand N Naik in *Technometrics* The authors offer a motivating discussion of research circumstances for which random factors may be particularly suitable and they define random factors more broadly and pragmatically than the traditional definition does on the basis of pure statistical sampling Random Factors in ANOVA will also probably be particularly useful to students who are not terribly quantitative in orientation because much of it strives to explain intuitively and verbally the relevant issues *Journal of Marketing Research* When and why are random factors other than subjects used How do you decide whether a factor is fixed or random Through the use of examples from management education political science and psychology Jackson and Brashers show the reader how to determine if a factor is random or fixed and how to deal in an analysis of variance ANOVA with random factors In addition they explore ways to incorporate random factors into an experimental design with other factors and discuss ways to adapt SAS and SPSSX for analyzing designs with random factors Multiple Indicators John L. Sullivan, Stanley Feldman, 1979 SAGE provides a presentation and critique of the use

of multiple measures of theoretical concepts for the assessment of validity using the multi trait multi method matrix and reliability using multiple indicators with a path analytic framework *Dynamic Modeling* R. Robert Huckfeldt, Kenneth Ewart Boulding, Carol W. Kohfeld, Thomas W. Likens, 1978 Outlines the theory behind and techniques for using dynamic modeling taking the reader through a series of increasingly complex models At each step examples are used to clarify applications of different equation models *Pooled Time Series Analysis* Lois W. Sayrs, 1989-05 Combining time series and cross sectional data provides the researcher with an efficient method of analysis and improved estimates of the population being studied This analysis technique allows the sample size to be increased which ultimately yields a more effective study

Processing Data Linda Brookover Bourque, Virginia Clark, 1992-06-06 This volume highlights the theory that decisions made during the design of a data collection instrument influence the kind of data and the format of the data that are available for analysis Opening with a discussion on the selection of the data collection techniques and how this impacts on data processing and the data for later analysis the book covers key issues such as should you create your own instrument for a questionnaire how do you test a questionnaire what are the characteristics of good data processing how to deal with missing data how to scale an evaluation and create subfiles for analysis In addition each major section concludes with examples and when appropriate directs the reader to commonly available computer software that can aid in data processing

Canonical Correlation Analysis Bruce Thompson, 1984-11 Recent advances in statistical methodology and computer automation are making canonical correlation analysis available to more and more researchers This volume explains the basic features of this sophisticated technique in an essentially non mathematical introduction that presents numerous examples Thompson discusses the assumptions logic and significance testing procedures required by this analysis noting trends in its use and some recently developed extensions Tree Models of Similarity and Association James E. Corter, 1996-04-02

Clustering and tree models are widely used in the social and biological sciences to analyze similarity relations Tree Models of Similarity and Association describes how matrices of similarities or associations among entities can be modeled using trees and to explain some of the issues that arise in performing such analyses and correctly interpreting the results James E Corter clearly distinguishes ultrametric trees fit by the techniques widely known as hierarchical clustering from additive trees and discusses how specific aspects of each type of tree can be interpreted through the use of applications as examples He concludes with a discussion of when tree models might be preferable to spatial geometric models such as those fit by multidimensional scaling MDS or principal components analysis PCA **Basic Math for Social Scientists** Timothy

Hagle, 1996-03 Aimed at providing readers who want a quick refresher course in mathematics with an informal review Timothy M Hagle's volume offers dozens of worked out examples of such mathematical concepts as algebra sets limits continuity differential calculus multivariate functions partial derivatives integral calculus and matrix algebra In addition Hagle provides problem sets so that readers can practice their grasp of standard mathematical procedures answers to these

problem sets are contained in the appendixes Written in a friendly style Basic Math for Social Scientists Problems and Solutions provides readers with an informal approach to mathematical procedures without proofs **Nonparametric Statistics** Jean Dickinson Gibbons, 1993 Through the use of actual research investigations that have appeared in recent social science journals Gibbons shows the reader the specific methodology and logical rationale for many of the best known and most frequently used nonparametric methods that are applicable to most small and large sample sizes The methods are organized according to the type of sample structure that produced the data to be analyzed and the inference types covered are limited to location tests such as the sign test the Mann Whitney Wilcoxon test the Kruskal Wallis test and Friedman s test The formal introduction of each test is followed by a data example calculated first by hand and then by computer
