L. Morison, Michael D. Morecroft, 2008-04-15 Evidence grows daily of the changing climate and its impact on plants and animals Plant function is inextricably linked to climate and atmospheric carbon dioxide concentration On the shortest and smallest scales the climate affects the plant's immediate environment and so directly influences physiological processes At larger scales the climate influences species distribution and community composition as well as the viability of different crops in managed ecosystems Plant growth also influences the local regional and global climate through the exchanges of energy and gases between the plants and the air around them Plant Growth and Climate Change examines the major aspects of how anthropogenic climate change affects plants focusing on several key determinants of plant growth atmospheric CO₂ temperature water availability and the interactions between these factors The book demonstrates the variety of techniques used across plant science detailed physiology in controlled environments observational studies based on long term data sets field manipulation experiments and modelling It is directed at advanced level university students researchers and professionals across the range of plant science disciplines including plant physiology plant ecology and crop science It will also be of interest to earth system scientists Forests, Carbon Cycle and Climate Change Denis Loustau, 2010-03-04 The results presented in this book summarize the main findings of the CARBOFOR project which brought together 52 scientists from 14 research units to investigate the effects of future climate on the carbon cycle the productivity and vulnerability of French forests This book explains the current forest carbon cycle in temperate and Mediterranean climates including the dynamics of soil carbon and the total carbon stock of French forests based on forest inventories It reviews and illustrates the main ground based methods for estimating carbon stocks in tree biomass Spatial variations in projected climate change over metropolitan France throughout the 21st century are described The book then goes on to consider the impacts of climate change on tree phenology and forest carbon balance evapotranspiration and production as well as their first order interaction with forest management alternatives The impact of climate change on forest vulnerability is analysed A similar simulation study was carried out for a range of pathogenic fungi emphasizing the importance of both warming and precipitation changes The consequences of climate change on the occurrence of forest fires and the forest carbon cycle in the Mediterranean zone are also considered A valuable reference for researchers and academics forest engineers and managers and graduate level students in forest ecology ecological modelling and forestry *Growth & Change in Animals Gr. 2-3*, **The Nature, Causes, Effects and Mitigation of Climate Change on the Environment** Stuart Harris, 2022-03-09 This book examines global warming and climate change over the past five decades in
