

# ANIMAL ASSISTED THERAPY 101

## 1. WHAT IS IT?

Animal assisted therapy is a therapeutic process where an animal is added to aid in the recovery plan of a patient. The therapist uses the animal to assist in achieving the goals set forth by the patient. The types of assistant may vary depending on the goals of the client.

## 2. WHEN IS IT USED?

- For children that are unable to express emotional needs or feelings
- Neurodivergent individuals who don't have the mental capacity to express themselves
- People working through trauma or major stressors in life
- And more!!!

## 3. HOW IT IS USED

This process is rooted in the innate bonding ability of animals and humans. These bonds helps shift the focus to the animal which brings pleasure instead of the focus on the mental illness.

## 4. BENEFITS

- Having a constant calming presence when attending therapy
- Creates a safer space for the clients to talk freely about their mental illness
- Able to use the animal as a stress reliever

## 5. EXAMPLES

- Kids in play therapy adding an animal to help direct it
- Neurodivergent individuals taking care of animals on a week-to-week basis
- Taking therapy dogs through a hospital
- Petting animals through a therapy session

the areas of academic training programs theory building and clinical practice Great effort has been put into understanding the mechanisms behind AAP as well as into developing ethical guidelines that take into account the therapist's responsibility toward both client and animal This book exposes the world to the theory and practice of AAP as conceived and used in Israel It emphasizes evidence based and clinically sound applications with psychotherapeutic goals as differentiated from other animal assisted interventions such as AAE animal assisted education and AAA animal assisted activities which may have education or skills oriented goals Not just anyone with a dog can call him or herself an animal assisted therapist This volume demonstrates not only the promise of animal assisted psychotherapeutic approaches but also some of the challenges the field still needs to overcome to gain widespread legitimacy

Animal-Assisted Therapy Maya Van Buren, In the quiet corridors of a children's hospital a golden retriever named Rusty makes his rounds with the practiced ease of a seasoned professional His tail wags gently as he approaches a young boy recovering from surgery and within moments the child's anxious expression melts into a smile This scene repeated countless times across healthcare facilities worldwide represents one of humanity's oldest therapeutic relationships finally receiving the scientific recognition it deserves The bond between humans and animals stretches back tens of thousands of years far beyond the dawn of recorded history Archaeological evidence suggests that dogs were domesticated as early as 15 000 years ago and possibly much earlier These early partnerships were born of mutual benefit humans provided shelter and food scraps while animals offered protection companionship and assistance with hunting What emerged from this practical arrangement was something far more profound than either species could have anticipated Ancient civilizations understood intuitively what modern science is now proving through rigorous research The Egyptians revered cats not merely as pest controllers but as sacred beings capable of providing emotional comfort Greek temples often housed animals believing their presence facilitated healing Native American traditions have long incorporated animals into spiritual and healing practices recognizing the therapeutic power of the human animal bond
