Astronomy Guide:

Cambridge Astronomy Guide William Liller, Ben Mayer, 1990-08-23 The Cambridge Astronomy Guide is intended for lovers of astronomy who wish to do more than just look at the night sky or marvel at glossy pictures of it. It tells you how to get outside and actually practise astronomy even if you own nothing more than a simple camera. Astronomy more than any other science offers amateurs the opportunity to make meaningful and lasting contributions to the field. This Guide explains in simple non-mathematical terms how you can take stunning star photographs and then put them to use making valuable contributions to the science of astronomy. Ben Mayer's odd-numbered chapters provide a fascinating account told with much humour of how one raw amateur got started and quickly progressed to become one of the world's best known and in many ways most successful amateur astronomers. Bill Liller's even-numbered chapters provide a more extensive commentary on much of what Ben writes plus some additional material which gives the professional point of view. Handbook of CCD Astronomy Steve B. Howell, 2006-03-02 Charge Coupled Devices (CCDs) are the state of the art detector in many fields of observational science. Updated to include all of the latest developments in CCDs, this second edition of the Handbook of CCD Astronomy is a concise and accessible reference on all practical aspects of using CCDs. Starting with their electronic workings, it discusses their basic characteristics and then gives methods and examples of how to determine these values. While the book focuses on the use of CCDs in professional observational astronomy, advanced amateur astronomers and researchers in physics, chemistry, medical imaging and remote sensing will also find it very valuable. Tables of useful and hard-to-find data, key practical equations and new exercises round off the book and ensure that it provides an ideal introduction to the practical use of CCDs for graduate students and a handy reference for more experienced users. **The ^AOxford Guide to the History of Physics and Astronomy** John L. Heilbron, 2005-06-03 With over 150 alphabetically arranged entries about key scientists, concepts, discoveries, technological innovations and learned institutions, the Oxford Guide to Physics and Astronomy traces the history of physics and astronomy from the Renaissance to the present. *The Oxford Guide to the History of Physics and Astronomy* J. L. Heilbron, 2005-06-03 The entries follow an elaborate organizational plan which amounts to a new classification of knowledge, its institutional settings and its applications. This plan is reprinted in the opening pages of the Guide. Thoroughly cross-referenced and accented with attractive black and white artwork, no other source is as systematic and authoritative or as informative and inviting in its coverage of physics, astronomy and planetary science. **BOOK JACKET** *The Guide to Amateur Astronomy* Jack Newton, Philip Teece, 1995-01-19 How do you choose your first telescope? Or build one from first principles? What can the deep sky offer you season by season? How do you get started in astrophotography? And progress to CCD imaging? The Guide to Amateur Astronomy answers the questions of the novice and the experienced amateur astronomer in one easy-to-use and comprehensive account. Throughout the emphasis is on practical methods to get you started and then develop your skills, with lavish illustrations to show you just what is possible. This second

edition of the highly successful Guide has been fully revised and updated It now takes you from basic piggyback astrophotography through the use of a cold camera to state of the art CCD imaging from studies of the planets to the most distant objects in the Universe From guidelines for the care and adjustment of your telescope through to lists of the spectral classification of stars amateur astronomy societies and clubs all the information you need for your voyage of discovery and revelation is provided in this self contained helpful guide **Handbook of Practical Astronomy** Günter D.
