

KnowledgeSTUDIO®

Advanced Modeling for Better Decisions

Companies that compete with analytics are looking for advanced analytical technologies that accelerate decision making and identify opportunities they can act on. Angoss is committed to democratizing the use of advanced analytics with products designed to enable both knowledge workers and data analysts to rapidly solve their most pressing business problems.

KnowledgeSTUDIO builds upon the market-leading data analysis, Decision Tree and predictive analytics capabilities provided in KnowledgeSEEKER with many additional advanced modeling and predictive analytics features for high-performance business users and quantitative analysts.

KnowledgeSTUDIO uniquely supports big data analytics with 64-bit in-memory addressing, in-database analytics drivers for massive parallel processing and enterprise data warehouse environments—and text analytics.

Text analytics capabilities allow you to merge your proprietary, structured data with unstructured (text-based) data to mine and analyze extremely large datasets and numbers of predictive variables more accurately.

Advanced modeling capabilities include linear and logistic regression, neural networks, scorecards and market basket analysis. Unsupervised learning techniques include cluster analysis and principal component analysis.

Data Preparation, Data Profiling and Exploration

Your first impression of KnowledgeSTUDIO is a familiar interface based on standards similar to the Microsoft Office® environment.

Highly intuitive and easy to use wizards help business users and quantitative analysts save time and obtain the knowledge needed.

KnowledgeSTUDIO is based on open standards and facilitates integration with all types of data sources. Data can be imported from Hadoop, R, SAS, SPSS, Text, SQL, Microsoft Excel, and any database system.

KnowledgeSTUDIO includes data preparation capabilities that allow users to easily extract, manipulate and transform data to prepare it for modeling—from within your enterprise data warehouse. Data preparation wizards increase productivity and efficiency and eliminate the need to write code.

Dataset-level and row-level manipulations are performed using wizards to join, append and aggregate datasets—and remove duplicates.

New variables can be defined using standard ANSI SQL expressions through the data editor wizard. Auto-generation of expressions using helpers is available for common tasks such as missing value substitution and optimal binning.
