2006 Canadian Foundation Engineering Manual:

Geotechnical Engineering Handbook Braja M. Das, 2011 The Geotechnical Engineering Handbook brings together essential information related to the evaluation of engineering properties of soils design of foundations such as spread footings mat foundations piles and drilled shafts and fundamental principles of analyzing the stability of slopes and embankments retaining walls and other earth retaining structures The Handbook also covers soil dynamics and foundation vibration to analyze the behavior of foundations subjected to cyclic vertical sliding and rocking excitations and topics addressed in some detail include environmental geotechnology and foundations for railroad beds LRFD Design and Construction of Shallow Foundations for Highway Bridge Structures, 2010 This report develops and calibrates procedures and modifies the AASHTO LRFD Bridge Design Specifications Section 10 Foundations for the Strength Limit State Design of Shallow Foundations The material in this report will be of immediate interest to bridge engineers and geotechnical engineers involved in the design of shallow foundations Modern Geotechnical Design Codes of Practice Patrick Arnold, Gordon A. Fenton, Michael A. Hicks, Timo Schweckendiek, Brian Simpson, 2013 The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering judgment Containing contributions on Code Implementation Code Application and Code Development this book provides a single resource that code developers practitioners and researchers can use to understand the different choices made by national code developers around the world Furthermore the book highlights some of the key challenges faced worldwide concerning the ongoing process of harmonizing geotechnical design code specifications *Basics of Foundation Design* Bengt Fellenius, 2017-03-17 The Red Book presents a background to conventional foundation analysis and design The text is not intended to replace the much more comprehensive standard textbooks but rather to support and augment these in a few important areas supplying methods applicable to practical cases handled daily by practising engineers and providing the basic soil mechanics background to those methods It concentrates on the static design for stationary foundation conditions Although the topic is far from exhaustively treated it does intend to present most of the basic material needed for a practising engineer involved in routine geotechnical design as well as provide the tools for an engineering student to approach and solve common geotechnical design problems **Canadian**

Communication of design risk within a transparent and rational framework is necessary in view of the increasing interest in code harmonization public involvement in defining acceptable risk levels and risk sharing among client consultant insurer and financier Activities in code harmonization are particularly noteworthy For the geotechnical engineering profession there is added pressure for it to undergo a significant revamp because structural and geotechnical design are increasingly incompatible The contributions in this volume tackle the important issues relating to new generation geotechnical design codes in a bid to move geotechnical engineers forward together with the significant changes occurring at the global level
