Animals And Psychedelics The Natural World And The Instinct To Alter Consciousness:

Animals and Psychedelics Giorgio Samorini, 2002-08-01 An Italian ethnobotanist explores the remarkable propensity of wild animals to seek out and use psychoactive substances Throws out behaviorist theories that claim animals have no consciousness Offers a completely new understanding of the role psychedelics play in the development of consciousness in all species Reveals drug use to be a natural instinct From caffeine dependent goats to nectar addicted ants the animal kingdom offers amazing examples of wild animals and insects seeking out and consuming the psychoactive substances in their environments Author Giorgio Samorini explores this little known phenomenon and suggests that far from being confined to humans the desire to experience altered states of consciousness is a natural drive shared by all living beings and that animals engage in these behaviors deliberately Rejecting the Western cultural assumption that using drugs is a negative action or the result of an illness Samorini opens our eyes to the possibility that beings who consume psychedelics whether humans or animals contribute to the evolution of their species by creating entirely new patterns of behavior that eventually will be adopted by other members of that species The author s fascinating accounts of mushroom loving reindeer intoxicated birds and drunken elephants ensure that readers will never view the animal world in quite the same way again *Cognitive*

Pagan,2021-11-16 From the cup of coffee that jumpstarts the day to dangerously addictive drugs the recreational use of plants with psychoactive properties has a long history among humans But as with many things it turns out that other animals got there first From parrots to primates consuming medicinal chemicals is an instinctive behavior that helps countless organisms fight infection and treat disease But the similarities don't end there Like us many creatures also consume substances that have no apparent benefit except for inducing intoxication In fact animals have been using drugs for recreational purposes since prehistoric times We may even have animals to thank for the idea legend says that coffee was discovered by observing the behavior of goats that had eaten it In his previous book *Strange Survivors* author and biologist On R Pagan introduced readers to some of the truly bizarre strategies animals use to survive in the cutthroat world of natural selection Now in *Drunk Flies and Stoned Dolphins* he sheds light on the surprising cravings they indulge when it's time to unwind In this book you'll get an eye opening glimpse into the mind altering behavior of the non human members of the animal kingdom spanning insects to elephants including the dolphin species that apparently likes to pass around an intoxicating pufferfish as if they were sharing a joint Combining fascinating science with humor and enthusiasm Pagan's latest is full of the kind of unforgettable stories and odd facts that you'll find yourself repeating to everyone you meet From fruit fly happy hour to the evolutionary reasons behind nature's drugs *Drunk Flies and Stoned Dolphins* takes you on a trip through the colorful world of animal intoxication and along the way explores what this science reveals about the surprising connections between all the world's creatures **Like a Little Dog** Anthony E. Plant Intelligence and the Imaginal Realm Stephen Harrod Buhner,2014-05-14 A manual for opening the doors of perception and directly engaging the intelligence of the Natural World Provides exercises to directly perceive and interact with the complex living self organizing being that is Gaia Reveals that every life form on Earth is highly intelligent and communicative Examines the ecological function of invasive plants bacterial resistance to antibiotics psychotropic plants and fungi and the human species In *Plant Intelligence and the Imaginal Realm* Stephen Harrod Buhner reveals that all life forms on Earth possess intelligence language a sense of I and not I and the capacity to dream He shows

that by consciously opening the doors of perception we can reconnect with the living intelligences in Nature as kindred beings become again wild scientists nondomesticated explorers of a Gaian world just as Goethe Barbara McClintock James Lovelock and others have done For as Einstein commented We cannot solve the problems facing us by using the same kind of thinking that created them Buhner explains how to use analogical thinking and imaginal perception to directly experience the inherent meanings that flow through the world that are expressed from each living form that surrounds us and to directly initiate communication in return He delves deeply into the ecological function of invasive plants bacterial resistance to antibiotics psychotropic plants and fungi and most importantly the human species itself He shows that human beings are not a plague on the planet they have a specific ecological function as important to Gaia as that of plants and bacteria Buhner shows that the capacity for depth connection and meaning filled communication with the living world is inherent in every human being It is as natural as breathing as the beating of our own hearts as our own desire for intimacy and love We can change how we think and in so doing begin to address the difficulties of our times Supernatural Selection Matt Rossano, 2010-06-08 In 2006 scientist Richard Dawkins published a blockbuster bestseller The God Delusion This atheist manifesto sparked a furious reaction from believers who have responded with numerous books of their own By pitting science against religion however this debate overlooks what science can tell us about religion According to evolutionary psychologist Matt J Rossano what science reveals is that religion made us human In Supernatural Selection Rossano presents an evolutionary history of religion Neither an apologist for religion nor a religion basher he draws together evidence from a wide range of disciplines to show the valuable even essential adaptive purpose served by systematic belief in the supernatural The roots of religion stretch as far back as half a million years when our ancestors developed the motor control to engage in social rituals that is to sing and dance together Then about 70 000 years ago a global ecological crisis drove humanity to the edge of extinction It forced the survivors to create new strategies for survival and religious rituals were foremost among them Fundamentally Rossano writes religion is a way for humans to relate to each other and the world around them and in the grim struggles of prehistory it offered significant survival and reproductive advantages It emerged as our ancestors first health care system and a critical part of that health care system was social support Religious groups tended to be far more cohesive which gave them a competitive advantage over non religious groups and enabled them to conquer the globe Rather than focusing on one aspect of religion as many theorists do Rossano offers an all encompassing approach that is rich with surprises insights and provocative conclusions
