

12 THINGS TO KNOW ABOUT RELATIVITY

EINSTEIN'S THEORIES OF RELATIVITY EXPLAINED ABOUT SPACE, TIME, GRAVITY, ENERGY, AND GRAVITY.

1 Prior to Einstein, Isaac Newton's laws were used to describe the universe. Newton wrote that gravity affects everything in the universe, from a tree kept the Earth in motion around the sun. But Newton never puzzled out the source of gravity.

2 Philosopher David Hume's 1738 "A Treatise of Human Nature" was a big influence on Einstein. Hume was a skeptic, believing that scientific concepts must be based on data that did not exist separately from the movement of nature.

"It is very well possible that without these philosophical studies I would not have arrived at the solution," Einstein wrote.

In 1905, Albert Einstein based a new theory on two principles. First, the laws of physics appear the same to all observers. Second, he calculated that the speed of light — 150,000 miles per second — is unchanged. Prior to Einstein, scientists believed that space was filled with ether, a medium for light waves. Einstein showed that light can change depending on the relative motion of the source and the observer.

4 As a result of his principles, Einstein deduced that there is no fixed frame of reference in the universe, hence Einstein's theory of relativity. It is known as special relativity because it applies only to motion. In 1915, Einstein published the general theory of relativity, which applied to frames that are accelerating with regard to each other.

As a result of his principles, Einstein deduced that there is no fixed frame of reference in the universe, hence Einstein's theory of relativity. It is known as special relativity because it applies only to motion. In 1915, Einstein published the general theory of relativity, which applied to frames that are accelerating with regard to each other.

5 Time does not pass at the same rate for everyone. A clock that is moving relative to a stationary clock "ticks" more slowly. This phenomenon is called time dilation. In this visualization, the moving watch runs more slowly than the stationary watch.

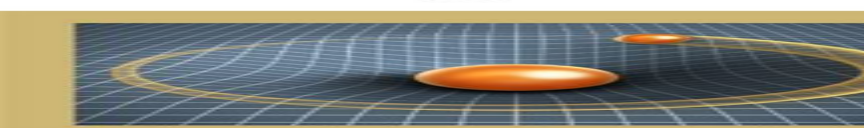

6 A fast-moving object appears shorter along the direction of motion, relative to a stationary observer. This effect is very subtle until the object travels close to the speed of light.

7 Mass and energy are interchangeable. Einstein's equation, $E=mc^2$, shows that energy is equal to mass times the speed of light squared. This means that a small amount of mass can be converted into a large amount of energy, and vice versa.

8 As a result of $E=mc^2$, a fast-moving object appears to have more mass than a slow-moving object. This is because the object's velocity is increasing, and its mass (since mass is energy) is increasing. In this visualization, a person is shown holding a bag that appears to be getting heavier as they move faster.

9 The increase in mass is not a real increase in mass, but a result of the object's velocity. In this visualization, a person is shown holding a bag that appears to be getting heavier as they move faster.

10 Space and time are part of a single fabric, called spacetime. In Einstein's mathematics, space has three dimensions, and time has one. More recent theories suggest that there are more dimensions that we do not perceive. Space-time can be thought of as a rubber sheet that stretches and warps. A rubber sheet model is a popular visualization.

11 Relativity explains where gravity comes from. The rubber sheet model shows that gravity results from mass warping space-time. The warp is called a gravity well. Orbiting objects follow the path that is shortest and requires the least amount of energy. In this visualization, a person is shown holding a bag that appears to be getting heavier as they move faster.

12 Gravity bends light. This is called gravitational lensing. Light from a distant galaxy is bent by the gravity of a closer galaxy, making it appear as if the light is coming from a different direction. In this visualization, a person is shown holding a bag that appears to be getting heavier as they move faster.

Multiple photos of a galaxy cluster, taken years away, showing the light bending and creating multiple images of the same galaxy appear.
