

# Solutions, acids, and bases

## 1. SOLUBILITY DEFINITION AND SOLUTIONS

**Solute** - what is **dissolved** in the solvent to form a solution.

**Solvent** - the substance that **dissolves** the solute, ordinarily a liquid, when the solute and the solvent come together to form a **homogeneous mixture**.

**Miscible** - can mix in all proportions (used to be mixed) - liquids will pour each other

**Immiscible** - can't mix in any proportions (used to be mixed)

Examples of miscible/immiscible: gasoline/water/alcohol, oil/water/detergent

**Solute** - **capable of being dissolved** in liquid

**Insoluble** - a substance (used to be a solid) that **will not dissolve** in a solvent. An example is sand and water

**Suspension** - looks like a **solution** when **stirred**, the **solids** a bit of water (suspensions). Also it is a **heterogeneous mixture** where the small solid particles of a substance are spread throughout a liquid without settling.

**undersaturated** - solutions with solubility (when the temperature were to change to make a saturated solution) but at a greater amount of solute. Solubility **less solute dissolved than can be held @ that temp**

**saturated** - solutions with solubility (when the temperature/solubility relationship is at the limit) in other words a **solution with solute the amount of the maximum possible amount**

**supersaturated** - contains **more than the max. amount of solute** that can be dissolved at the temperature or the solubility (when this works when the grams of solute would go above the line).

## 2. SOLUBILITY VS. TEMPERATURE CHART

Above the line - **supersaturated**

At the line - **saturated**

Under the line - **undersaturated**

## 3. METHODS OF SEPARATION

**Distillation** - separate particles by **boil**

**distillation** - separate by **boiling point** - **evaporate** the liquid to be separated.

**extraction** - allows one to remove a **liquid from a solid** by **transferring** the liquid to a **different phase**.

**centrifugation** - separating molecules by their densities by spinning them apart.

**decanting** - process of separating insoluble or suspension solutions by **pouring** away the liquid from the solid.

**chromatography** - separation by the **rates** at which components of different solutions **travel through a medium** (e.g. gel electrophoresis)

*Organic Chemistry, 12e Binder Ready Version Study Guide & Student Solutions Manual* T. W. Graham Solomons, Craig B. Fryhle, Scott A. Snyder, 2016-04-11 This is the Student Study Guide Solutions Manual to accompany Organic Chemistry 12th Edition. The 12th edition of Organic Chemistry continues Solomons Fryhle Snyder's tradition of excellence in teaching and preparing students for success in the organic classroom and beyond. A central theme of the authors' approach to organic chemistry is to emphasize the relationship between structure and reactivity. To accomplish this, the content is organized in a way that combines the most useful features of a functional group approach with one largely based on reaction mechanisms. The authors' philosophy is to emphasize mechanisms and their common aspects as often as possible and at the same time use the unifying features of functional groups as the basis for most chapters. The structural aspects of the authors' approach show students what organic chemistry is. Mechanistic aspects of their approach show students how it works. And wherever an opportunity arises, the authors show students what it does in living systems and the physical world around us.
