## **Acoustics Of Long Spaces Theory And Design Guidance:**

**Acoustics of Long Spaces** Jian Kang, 2002 Acoustics is a major concern in many long spaces such as road or railway tunnels underground railway stations corridors concourses and urban streets The specific problems of such irregularly shaped spaces ranging from noise pollution in streets and tunnels to poor speech intelligibility of public address systems in railway stations are not dealt with by classic room acoustic theory. This state of the art exposition of acoustics of long spaces presents the fundamentals of acoustic theory and calculation formulae for long spaces as well as giving guidelines for Building Acoustics Marc Asselineau, 2015-03-18 Avoid Costly Mistakes for Specialists and Non Specialists AlikeBad acoustics in buildings is a nuisance that is not dealt with easily The problem applies just as much to open plan offices and restaurants and to production facilities and transportation stations as it does to performance halls not to mention homes It does not merely affect oral co Design and Management of Sustainable Built Environments Runming Yao, 2013-03-12 Climate change is believed to be a great challenge to built environment professionals in design and management An integrated approach in delivering a sustainable built environment is desired by the built environment professional institutions The aim of this book is to provide an advanced understanding of the key subjects required for the design and management of modern built environments to meet carbon emission reduction targets In Design and Management of Sustainable Built Environments an international group of experts provide comprehensive and the most up to date knowledge covering sustainable urban and building design management and assessment The best practice case studies of the implementation of sustainable technology and management from the BRE Innovation Park are included Design and Management of Sustainable Built Environments will be of interest to urban and building designers environmental engineers and building performance assessors It will be particularly useful as a reference book for undergraduate and postgraduate students in the built environment field Indoor Sound Environment and Acoustic Perception Qi Meng, Yue Wu, 2024-09-23 This book mainly presents the state of the art development in indoor sound environment Not simply introducing the research on the acoustic environment or noise level of indoor building the book considers the differences in the function of buildings and the perception of acoustic environment as well as the relationship between sound quality and health and behavior The book includes the multidisciplinary studies in architecture acoustics environmental science psychology sociology and management Therefore it is used as a quide for government decision makers developers planners and architects to understand the effects of architectural design on building acoustic environment **Urban Sound Environment** Jian Kang, 2006-09-27 Over the past two decades there have been many major new developments in the field of urban sound environment Jian Kang introduces and examines these key developments including the development of prediction methods for urban sound propagation establishment and application of noise mapping software new noise control measures and design methods Also covered is the new EU directive on noise and the substantial actions it has brought about across Europe

As the importance of soundscape acoustic comfort and sound environment design have become widely recognized Urban Sound Environments is a thoroughly useful book for students and practitioners in a wide range of fields from urban planning and landscape through to architecture and acoustics Designing High-Density Cities Edward Ng, 2010 Compact living is sustainable living High density cities can support closer amenities encourage reduced trip lengths and the use of public transport and therefore reduce transport energy costs and carbon emissions High density planning also helps to control the spread of urban suburbs into open lands improves efficiency in urban infrastructure and services and results in environmental improvements that support higher quality of life in cities Encouraging even requiring higher density urban development is a major policy and a central principle of growth management programmes used by planners around the world However such density creates design challenges and problems A collection of experts in each of the related architectural and planning areas examines these environmental and social issues and argues that high density cities are a sustainable solution It will be essential reading for anyone with an interest in sustainable urban development Soundscape and the Built **Environment** Jian Kang, Brigitte Schulte-Fortkamp, 2018-10-09 Soundscape Basics and Practical Implications Soundscape research represents a paradigm shift as it involves human and social sciences and physical measurements to account for the diversity of soundscapes across countries and cultures Moreover it treats environmental sounds as a resource rather than a waste Soundscape and the Built Environment is the first book to systematically discuss soundscape in the built environment It begins with a presentation of theory and basic background answering questions such as what is soundscape how is it important and how does it affect people in terms of their health and perception on the acoustic environment. The book then sets out tools for implementing a soundscape approach with measurement techniques mapping and good soundscape practices It also delivers a series of examples of the application of the soundscape approach in planning design and assessment Discusses soundscape and environmental noise Explores cultural variations and the way they influence soundscape Introduces binaural measurement technology and psychoacoustics Examines the physical psychological and physiological restorative mechanism of high quality acoustic environments Presents soundscape mapping based on human perception of sound sources Includes real world examples and case studies highlighting the key issues in soundscape intervention Soundscape and the Built Environment is written by a group of leading international figures and derives from a four year EU COST project on Soundscapes of European Cities and Landscapes It presents a consensus on the current state of the art and is not merely a collection of different views It is written for acoustic consultants urban planners designers and **Sound Insulation** Carl Hopkins, 2020-09-23 Sound policy makers as well as for graduate students and researchers insulation is an important aspect of building performance This book is a comprehensive guide to sound and vibration theory and its application to the measurement and prediction of sound insulation in buildings It enables the reader to tackle a wide range of issues relating to sound insulation during the design and construction stages of a building and to solve problems in

existing buildings The book has been written for engineers consultants building designers students in acoustics researchers and those involved in the manufacture and design of building products Key aspects are that it Explains the fundamental theory using examples that show its direct application to buildings Guides the reader through the links between measurement and theory Explains concepts that are important for the application interpretation and understanding of guidance documents test reports product data sheets published papers regulations and Standards Makes direct reference to ISO and EN Standards on sound insulation Contains a large number of illustrations showing measurements predictions and example calculations for quick reference Carl Hopkins previously worked on building acoustics and environmental noise at the Building Research Establishment During this time he was involved with sound insulation in research consultancy standardization and building regulations as well as being an advisor on acoustics to government departments He is currently a Senior Lecturer at the University of Liverpool within the Acoustics Research Unit of the School of Architecture
