

**Unit 8, Lesson 1: Probabilities and Outcomes**

**Activity 1.1: Launch**

- 1.) A woman has three sons. What is the probability that her fourth child is a daughter?
  
  
  
  
  
- 2.) You purchased two tickets for a school raffle to win a new laptop. There were 1020 ticket sold. What is the probability of your winning the laptop?
  
  
  
  
  
- 3.) Dwayne's father told him he has two extra tickets for the concert that can be used by Dwayne and his four siblings. Assuming they come up with a fair method for deciding which two siblings get a ticket, what are Dwayne's chances of going to the concert?

In probability, you refer to the set of all the possible outcomes as the **sample space**. Take the classic situation of rolling two dice. The sample space is shown in the box below:

In some situations, like this one, if the dice are fair, then each outcome is **equally likely**. This makes it easy to find probability.

The probability of  is  $\frac{1}{36}$  because there are 36 equally likely outcomes

When you are asked to calculate probability, you must determine (a) what is the sample space of all outcomes and (b) are those outcomes equally likely.

**Probability Formula:** When outcomes are equally likely then the probability of an event is equal to the number of outcomes of that event divided by the total number of outcomes.

**Activity 1.2: Example A**

If you roll two fair six sided dice then what is the probability that...

- 1.) The two values will multiply to equal to 12?
  
  
  
  
  
- 2.) The difference in the two values is equal to 2?
